I. Nwogugu,2017-06-09 This book explores why Modified Internal Rate of Return MIRR and Net Present Value NPV are not necessarily accurate or efficient tools for valuation and decision making The author specifically addresses the biases and framing effects inherent in the NPV MIRR IRR model and in related approaches such as Adjusted Present Value APV Net Future Value NFV and by extension Polynomials In doing so the book presents new ways of solving higher order polynomials using invariants and homomorphisms and explains why the Fundamental Theorem of Algebra the Binomial Theorem and the Descartes Sign Rule are unreliable Chapters also discuss how International Asset Pricing Theory IAPT and Intertemporal Capital Asset Pricing Models ICAPM can produce inaccurate results in certain circumstances The conditions under which ICAPM and IAPT may be accurate are described as well as why those conditions cannot or are unlikely to exist The conditions under which negative interest rates may exist or are justified are also outlined Moreover the author explains why traditional Consumption Savings Investment Production models of allocation can be inefficient and then introduces a new model of allocation that can be applied to individuals households and companies Finally the book explains why the Elasticity of Intertemporal Substitution is a flawed concept and introduces the Marginal Rate of Intertemporal Joint Substitution as a solution **Science Activities** ,1999 **Thought Experiments** Roy A. Sorensen,1992 This text analyses a variety of thought experiments and explores what they are how they work and what their positive and negative aspects are It also sets the theory within an evolutionary framework of advances in experimental psychology *Distorted Time Preferences and Structural Change in the Energy Industry* Christoph Heinzl,2009-05-07 The

present study is a slightly revised version of my PhD thesis which was accepted at the Economics Department of Dresden University of Technology in July 2008 It has a long and a short history For it began as suggested theme as a fundamental evaluation of evolutionary economics for ecological economics asking especially for what the two elds actually constitutes and eventually relates In several years of unfruitful dwelling however neither of these two young non mainstream elds proved as constituted at a fundamental level as yet Rather ecological economics founded at the end of the 1980s as an attempt to combine social and natural science approaches in particular economics and ecology to study especially long run environmental problems in an encompassing manner has mainly developed into an interdisciplinary research forum on environmental economic issues Particularly unified by certain normative stances shared within its community it constitutes well understood a new discipline of its own right distinct from economics with its own scientific standards questions methodologies and institutions Baumgartner and Becker 2005 Modern evolutionary economics on the other hand has been a quarter of a century after its inception with Nelson and Winter 1982 still a mainly heterogeneous endeavor linked by a rather amorphous common interest in economic evolution and a critical stance towards neoclassical mainstream economics with a certain strength in applied studies on industrial dynamics Heinzl 2004 2006
