Learning deep Benjamin Säfken, Alexander Silbersdorff, Christoph Weisser, 2020 Artificial intelligence is considered to be one of the most decisive topics in the 21th century Deep learning algorithms which are the basis of artificial intelligence applications are of central interest for researchers but also for students that strive to build up academic knowledge and practical competences in this field The Deep Learning Seminar at the University of G ttingen

follows the central notion of the Humboldtian model of higher education and offers graduate students of applied statistics the opportunity to conduct their own research. The quality of the results motivated us to publish the most promising seminar papers in this volume. For the selected papers a full peer review process was conducted. The presented contributions cover a broad range of deep learning topics. The articles in the first part of this volume may serve the reader as introduction to deep learning algorithms. Subsequently research applications allow the reader to gain deep insights into some of the latest developments in the field of artificial intelligence.

Artificial Intelligence of Things for Weather Forecasting and Climatic Behavioral Analysis. Gupta, Rajeev Kumar, Jain, Arti, Wang, John, Singh, Ved Prakash, Bharti, Santosh, 2022-06-10. Weather forecasting and climate behavioral analysis have traditionally been done using complicated physics models and accompanying atmospheric variables. However, the traditional approaches lack common tools which can lead to incomplete information about the weather and climate conditions in turn affecting the prediction accuracy rate. To address these problems, the advanced technological aspects through the spectrum of artificial intelligence of things (AIoT) models serve as a budding solution. Further study on artificial intelligence of things and how it can be utilized to improve weather forecasting and climatic behavioral analysis is crucial to appropriately employ the technology. *Artificial Intelligence of Things for Weather Forecasting and Climatic Behavioral Analysis* discusses practical applications of artificial intelligence of things for interpretation of weather patterns and how weather information can be used to make critical decisions about harvesting, aviation, etc. This book also considers artificial intelligence of things issues such as managing natural disasters that impact the lives of millions. Covering topics such as deep learning, remote sensing and meteorological applications, this reference work is ideal for data scientists, industry professionals, researchers, academicians, scholars, practitioners, instructors and students.
