Sarangi,Anand Rajavat,Mary Sowjanya Alamanda,Kotagiri Srividya,K. Sakthidasan Sankaran,2024-03-06 This book reviews
present state of the art research related to the security of cloud computing including developments in conversational AI
applications It is particularly suited for those that bridge the academic world and industry allowing readers to understand the
security concerns in advanced security solutions for conversational AI in the cloud platform domain by reviewing present and
evolving security solutions their limitations and future research directions Conversational AI combines natural language
processing NLP with traditional software like chatbots voice assistants or an interactive voice recognition system to help
customers through either a spoken or typed interface Conversational chatbots that respond to questions promptly and
accurately to help customers are a fascinating development since they make the customer service industry somewhat self
sufficient A well automated chatbot can decimate staffing needs but creating one is a time consuming process Voice
recognition technologies are becoming more critical as AI assistants like Alexa become more popular Chatbots in the
corporate world have advanced technical connections with clients thanks to improvements in artificial intelligence However
these chatbots increased access to sensitive information has raised serious security concerns Threats are one time events
such as malware and DDOS Distributed Denial of Service assaults Targeted strikes on companies are familiar and frequently
lock workers out User privacy violations are becoming more common emphasizing the dangers of employing chatbots
Vulnerabilities are systemic problems that enable thieves to break in Vulnerabilities allow threats to enter the system hence
they are inextricably linked Malicious chatbots are widely used to spam and advertise in chat rooms by imitating human
behavior and discussions or to trick individuals into disclosing personal information like bank account details **Ask,

architecture since it is not only a means of change but also one of the keystones of economic competitiveness and the fundamental precursor to manufacturing. However, our understanding of design as a process and our ability to model it are still very limited. The development of computational models founded on the artificial intelligence paradigm has provided an impetus for much of current design research, both computational and cognitive. Notwithstanding their immaturity, noticeable advances have been made both in extending our understanding of design and in developing tools based on that understanding.
