Language Machines Leif Weatherby, 2025-06-24 How generative AI systems capture a core function of language Looking at the emergence of generative AI Language Machines presents a new theory of meaning in language and computation arguing that humanistic scholarship misconstrues how large language models LLMs function Seeing LLMs as a convergence of computation and language Leif Weatherby contends that AI does not simulate cognition as widely believed but rather creates culture This evolution in language he finds is one that we are ill prepared to evaluate as what he terms remainder humanism counterproductively divides the human from the machine without drawing on established theories of representation that include both To determine the consequences of using AI for language generation Weatherby reads linguistic theory in conjunction with the algorithmic architecture of LLMs He finds that generative AI captures the ways in which language is at first complex cultural and poetic and only later referential functional and cognitive This process is the semiotic hinge on which an emergent AI culture depends Weatherby calls for a general poetics of computational cultural forms under the formal conditions of the algorithmic reproducibility of language Locating the output of LLMs on a spectrum from poetry to ideology Language Machines concludes that literary theory must be the backbone of a new rhetorical training for our linguistic computational culture

Vector Semantics András Kornai, 2023-01-07 This open access book introduces Vector semantics which links the formal theory of word vectors to the cognitive theory of linguistics The computational linguists and deep learning researchers who developed word vectors have relied primarily on the ever increasing availability of large corpora and of computers with highly parallel GPU and TPU compute engines and their focus is with endowing computers with natural language capabilities for practical applications such as machine translation or question answering Cognitive linguists investigate natural language from the perspective of human cognition the relation between language and thought and questions about conceptual universals relying primarily on in depth investigation of language in use In spite of the fact that these two schools both have linguistics in their name so far there has been very limited communication between them as their historical origins data collection methods and conceptual apparatuses are quite different Vector semantics bridges the gap by presenting a formal theory cast in terms of linear polytopes that generalizes both word vectors and conceptual structures by treating each dictionary definition as an equation and the entire lexicon as a set of equations mutually constraining all meanings
