Artificial intelligence, introduction to the issues and current trends* Pavel Bartoš,2023-01-01 Artificial Intelligence AI often referred to by the acronym Artificial Intelligence is a fascinating and dynamically developing field that has far reaching implications for various sectors of human activity At its core it is the simulation of human intelligence in computer systems AI is capable of learning planning problem solving speech recognition visual perception and many other cognitive functions that were previously considered the exclusive domain of human thought **THE INTELLIGENCE OF MACHINES** Patrick K. Kalifungwa,2024-11-13 In a 1951 lecture Turing Alan 1951 Turing argued It seems probable that once the machine thinking method had started it would not take long to outstrip our feeble powers There would be no question of the machines dying

and they would be able to converse with each other to sharpen their wits At some stage therefore we should have to expect the machines to take control in the way that is mentioned in Samuel Butler s Erewhon Also in a lecture broadcast on the BBC Turing Alan 1951 He expressed the opinion If a machine can think it might think more intelligently than we do and then where should we be Even if we could keep the machines in a subservient position for instance by turning off the power at strategic moments we should as a species feel greatly humbled This new danger is certainly something which can give us anxiety as interpreted by Seth Baum Hubert Dreyfus writes In general by accepting the fundamental assumptions that the nervous system is part of the physical world and that all physical processes can be described in a mathematical formalism which can in turn be manipulated by a digital computer one can arrive at the strong claim that the behavior which results from human information processing whether directly formalizable or not can always be indirectly reproduced on a digital machine Dreyfus 1972 John Searle writes Could a man made machine think Assuming it possible produce artificially a machine with a nervous system the answer to the question seems to be obviously yes Could a digital computer think If by digital computer you mean anything at all that has a level of description where it can be correctly described as the instantiation of a computer program then again the answer is of course yes since we are the instantiations of any number of computer programs and we can think Searle 1980

 Dziedzic-Elliott, 2024-11-28 Information literacy is a complex subject that finally arrived at the doorstep of school libraries
 For decades academic researchers have been trying to capture the essence of information literacy its educational cognitive
 and civic value The collection of book chapters offered in We Can Teach That is a handbook that can be used as an
 inspiration for teaching various types of literacy visual digital multicultural health and more The book asks important
 questions When do we start teaching information literacy How do we teach it How does it affect our students at their
 education level How does it prepare them for their post high school adult life Does it impact their transition to college or
 career Dziedzic Elliott and her collaborators provide a range of best practices and concepts that inspire thinking about
 teaching information literacy at all levels Although written with school librarians in mind the book can be easily adapted by
 teachers school administrators and even public librarians who are looking to incorporate information literacy elements in

their daily practices The book challenges the reader to rethink what they know about digital or tech literacy breaks some stereotypical concepts about multicultural literacy and highlights the importance of literacies even in adulthood Artificial Intelligence for Strategic Communication Karen E.
