AI Aesthetics Jan-Noël Thon, Lukas R.A. Wilde, 2025-09-09. This volume investigates the intersection of generative AI and media aesthetics from an interdisciplinary perspective. Combining in-depth theoretical reflection with a diverse selection of case studies, its authors explore the aesthetic forms of AI-generated medial objects as well as the cultural imaginaries that the latter draw upon. Bringing together a group of scholars from various geographic and disciplinary backgrounds, the chapters move within and across different conceptualizations of AI aesthetics that can be located in between an aesthetics as *artistics* that is primarily concerned with aesthetic judgments related to skill and connoisseurship and an aesthetics as *aisthetics* that identifies all kinds of embodied perception as its object. The book thus reflects on both the theoretical and the methodological implications of AI aesthetics while also demonstrating that this is still very much an emerging research field and that no dominant conceptualization of AI aesthetics has yet emerged. Considering its decidedly international and interdisciplinary scope, *AI Aesthetics: AI Generated Images between Artistics and Aisthetics* will appeal to scholars and students within media

accessory before they release their work to the public Pattern drafting is the first and most important step in dressmaking Designers typically start with a general sketch on paper add styles elements and colours revise and refine everything and finally deliver their design to dressmakers AI accelerates this time consuming and labour intensive process Yet the full legal consequences of AI in fashion industry are often forgotten An AI device s ability to generate fashion designs raises the question of who will own intellectual property rights over the fashion designs Will it be the fashion designer who hires or contracts with the AI programmer Will it be the programmer Will it be the AI itself Or will it be a joint work of humans and computers And who will be liable for infringement deriving from use of third party material in AI generated fashion designs This book explores answers to these questions within the framework of EU design and copyright laws It also crafts a solution proposal based on a three step test and model norms which could be used to unleash the authors rights holders and infringers around AI generated fashion designs
