I Bytes Technology Industry ITShades.com,2021-01-14 This document brings together a set of latest data points and publicly available information relevant for Technology Industry We are very excited to share this content and believe that readers will benefit from this periodic publication immensely *Programming Massively Parallel Processors* Wen-mei W. Hwu,David B. Kirk,Izzat El Hajj,2022-05-28 *Programming Massively Parallel Processors A Hands On Approach* shows both students and professionals alike the basic concepts of parallel programming and GPU architecture Concise intuitive and practical it is based on years of road testing in the authors own parallel computing courses Various techniques for constructing and optimizing parallel programs are explored in detail while case studies demonstrate the development process which begins with computational thinking and ends with effective and efficient parallel programs The new edition includes updated coverage of CUDA including the newer libraries such as CuDNN New chapters on frequently used parallel patterns have been added and case studies have been updated to reflect current industry practices *Parallel Patterns* Introduces new chapters on frequently used parallel patterns stencil reduction sorting and major improvements to previous chapters convolution histogram sparse matrices graph traversal deep learning Ampere Includes a new chapter focused on GPU architecture and draws examples from recent architecture generations including Ampere Systematic Approach Incorporates major improvements to abstract discussions of problem decomposition strategies and performance considerations with a new optimization checklist *Internet Science* Sotiris Diplaris,Anna Satsiou,Asbjørn Følstad,Michail Vafopoulos,Thomas Vilarinho,2018-03-22 This book constitutes the refereed post conference proceedings of 4 workshops held at the 4th International Conference on Internet Science Thessaloniki Greece in November 2017 the Second International Workshop on the Internet for Financial Collective Awareness and Intelligence IFIN 2017 the International Workshop on Data Economy 2017 the International Workshop on Digital Technology to Support Social Innovation DSI 2017 and the International Workshop on Chatbot Research and Design CONVERSATIONS 2017 The 17 full papers presented together with one short paper were carefully reviewed and selected from 27 submissions The contributions of the IFIN workshop focus on a multidisciplinary dialogue on how to use the internet to promote financial awareness and capability among citizens whereas the papers of the Data Economy workshop show how online data change economy and business The aim of the DSI workshop was to collect the lessons learned from different platforms and settings and to understand the requirements and challenges for building and using digital platforms to effectively engage broad participation in the social innovation process The papers of the Conversations workshop explore the brave new world of human computer communication through natural language gathering latest developments in chatbots research and design

High-performance and hardware-aware computing Rainer Buchty,2014-10-16 High performance system architectures are increasingly exploiting heterogeneity The HipHaC workshop aims at combining new aspects of parallel heterogeneous and

reconfigurable microprocessor technologies with concepts of high performance computing and particularly numerical solution methods Compute and memory intensive applications can only benefit from the full hardware potential if all features on all levels are taken into account in a holistic approach

Generative AI: Foundations, Models and Applications Dr. K. VANITHA SIDAMBARANATHAN, Dr. R. SRIVIDHYA, Dr. P. EDITH LINDA, Dr. LINCE RACHEL VARGHESE, 2025-10-15
Generative AI Foundations Models and Applications provides a comprehensive exploration of one of the most transformative areas of artificial intelligence. Designed for students, researchers, educators, and professionals, this book offers a balanced blend of theory, models, and real-world use cases of generative AI. The text begins by introducing the fundamentals of generative modeling, covering the mathematical and conceptual underpinnings that make generative AI possible. It then progresses into a detailed study of prominent models, including Generative Adversarial Networks (GANs), Variational Autoencoders (VAEs), Diffusion Models, Large Language Models (LLMs), and Multimodal Systems. Beyond the foundations, the book emphasizes the practical applications of generative AI across industries, ranging from natural language processing, computer vision, and healthcare to education, creative arts, business innovation, and scientific research. Ethical considerations, challenges, and future trends are also discussed, equipping readers to critically analyze the opportunities and risks of this rapidly evolving field. With clear explanations, case studies, and an application-driven perspective, this book serves as both an academic resource and a practical guide for those seeking to understand and leverage generative AI in real-world contexts.

Mobile Cloud Visual Media Computing Gang Hua, Xian-Sheng Hua, 2015-11-23
This book explores the internet and mobile ecosystems, which are powered by cloud computing, an essential if not indispensable part of our everyday lives. Billions of users worldwide use this technology for information sharing, communication, and social networking, and a high proportion of activity is driven by massive media content, such as images, videos, and other emerging 3D visual media. However, managing, searching, and visualizing this gigantic amount of data to facilitate communication is difficult, which has led to an influx of innovation and research in these areas. The research is from academics from all around the world, focusing on the intersection of mobile cloud visual and multimedia computing and is split into five clear parts. Topics covered in the book include mobile augmented reality, computational photography, mobile visual recognition and search, and human-computer interaction (HCI). The findings discussed are meant to spur on further creative development in both academia and industry within this area. Mobile Cloud Visual Media Computing would be of great interest to researchers and academics wishing to see how the state of the art in media computing research is applied to innovative applications, whilst engineers and software designers from industry will gain an insight into the key set of technologies which support mobile and cloud media computing.

Materials Informatics II Kunal Roy, Arkaprava Banerjee, 2025-03-14
This contributed volume explores the application of machine learning in predictive modeling within the fields of materials science, nanotechnology, and cheminformatics. It covers a range of topics, including electronic properties of metal nanoclusters, carbon quantum dots, toxicity assessments of nanomaterials,

and predictive modeling for fullerenes and perovskite materials. Additionally, the book discusses multiscale modeling and advanced decision support systems for nanomaterial risk management while also highlighting various machine learning tools, databases, and web platforms designed to predict the properties of materials and molecules. It is a comprehensive guide and a great tool for researchers working at the intersection of machine learning and material sciences. **Popular Science**

,2004-12 Popular Science gives our readers the information and tools to improve their technology and their world. The core belief that Popular Science and our readers share: The future is going to be better, and science and technology are the driving forces that will help make it better. *Deep Learning* Stephane Tuffery,2022-11-14 DEEP LEARNING: A concise and practical exploration of key topics and applications in data science. In *Deep Learning: From Big Data to Artificial Intelligence with R*, expert researcher Dr. Stéphane Tuffery delivers an insightful discussion of the applications of deep learning and big data that focuses on practical instructions on various software tools and deep learning methods relying on three major libraries: MXNet, PyTorch, and Keras/TensorFlow. In the book, numerous up-to-date examples are combined with key topics relevant to modern data scientists, including processing optimization, neural network applications, natural language processing, and image recognition. This is a thoroughly revised and updated edition of a book originally released in French, with new examples and methods included throughout. Classroom-tested and intuitively organized, *Deep Learning: From Big Data to Artificial Intelligence with R* offers complimentary access to a companion website that provides R and Python source code for the examples offered in the book. Readers will also find a thorough introduction to practical deep learning techniques with explanations and examples for various programming libraries. Comprehensive explorations of a variety of applications for deep learning, including image recognition and natural language processing, discussions of the theory of deep learning, neural networks, and artificial intelligence, linked to concrete techniques and strategies commonly used to solve real-world problems. Perfect for graduate students studying data science, big data, deep learning, and artificial intelligence, *Deep Learning: From Big Data to Artificial Intelligence with R* will also earn a place in the libraries of data science researchers and practicing data scientists. *PC World*, 2002 *Hands-On GPU Programming with Python and CUDA* Dr. Brian Tuomanen,2018-11-27 Build real-world applications with Python 2.7, CUDA 9, and CUDA 10. We suggest the use of Python 2.7 over Python 3.x since Python 2.7 has stable support across all the libraries we use in this book. Key Features: Expand your background in GPU programming with PyCUDA, scikit-cuda, and Nsight. Effectively use CUDA libraries such as cuBLAS, cuFFT, and cuSolver. Apply GPU programming to modern data science applications. Book Description: *Hands-On GPU Programming with Python and CUDA* hits the ground running. You'll start by learning how to apply Amdahl's Law, use a code profiler to identify bottlenecks in your Python code, and set up an appropriate GPU programming environment. You'll then see how to query the GPU's features and copy arrays of data to and from the GPU's own memory. As you make your way through the book, you'll launch code directly onto the GPU and write full-blown GPU kernels and device functions in CUDA C. You'll get to grips with

profiling GPU code effectively and fully test and debug your code using Nsight IDE Next you ll explore some of the more well known NVIDIA libraries such as cuFFT and cuBLAS With a solid background in place you will now apply your new found knowledge to develop your very own GPU based deep neural network from scratch You ll then explore advanced topics such as warp shuffling dynamic parallelism and PTX assembly In the final chapter you ll see some topics and applications related to GPU programming that you may wish to pursue including AI graphics and blockchain By the end of this book you will be able to apply GPU programming to problems related to data science and high performance computing What you will learnLaunch GPU code directly from PythonWrite effective and efficient GPU kernels and device functionsUse libraries such as cuFFT cuBLAS and cuSolverDebug and profile your code with Nsight and Visual ProfilerApply GPU programming to datascience problemsBuild a GPU based deep neuralnetwork from scratchExplore advanced GPU hardware features such as warp shufflingWho this book is for Hands On GPU Programming with Python and CUDA is for developers and data scientists who want to learn the basics of effective GPU programming to improve performance using Python code You should have an understanding of first year college or university level engineering mathematics and physics and have some experience with Python as well as in any C based programming language such as C C Go or Java
