The Aesthetics of Scientific Experiments Milena Ivanova,Alice Murphy,2023-06-16 The relationship between aesthetics and science has begun to generate substantial interest However for the most part the focus has been on the beauty of theories and other aspects of scientific practice have been neglected This book offers a novel perspective on aesthetics in experimentation via ten original essays from an interdisciplinary group comprised of philosophers historians of science and art and artists The collection provides an analysis of the concept of beauty in the evaluation of experiments What properties do practising experimenters value How have the aesthetic properties of scientific experiments changed over the years Secondly the volume looks at the role that aesthetic factors including negative values such as ugliness as well as experiences of the sublime and the profound play in the construction of an experiment and its reception Thirdly the chapters provide in depth historical case studies from the Royal Society which also allows for a study of the depiction of scientific experiment in artworks as well as contemporary examples from the Large Hadron Collider and cases of experiments designed by artificial intelligence Finally it offers an exploration of the commonalities between how we learn from experiments on the one hand and the cognitive value of artworks on the other The Aesthetics of Scientific Experiments will be of interest to researchers and advanced students working in philosophy and history of science philosophy and history of art as well as practising scientists and science communicators

Teaching Science in Elementary and Middle School Cory A. Buxton,Eugene F. Provenzo, Jr.,2010-07-08 A practical methods text that prepares teachers to engage their students in rich science learning experiences Featuring an increased emphasis on the way today s changing science and technology is shaping our culture this Second Edition of Teaching Science in Elementary and Middle School provides pre and in service teachers with an introduction to basic science concepts and methods of science instruction as well as practical strategies for the classroom Throughout the book the authors help readers learn to think like scientists and better understand the role of science in our day to day lives and in the history of Western culture Part II features 100 key experiments that demonstrate the connection between content knowledge and effective inquiry based

pedagogy The Second Edition is updated throughout and includes new coverage of applying multiple intelligences to the teaching and learning of science creating safe spaces for scientific experimentation using today's rapidly changing online technologies and more Valuable Instructor and Student resources The password protected Instructor Teaching Site includes video clips that illustrate selected experiments PowerPoint lecture slides Electronic Test Bank Teaching guides and Web resources The open access Student Study Site includes tools to help students prepare for exams and succeed in the course video clips that illustrate selected experiments chapter summaries flash cards quizzes helpful student guides links to state standards licensure exams and PRAXIS resources and Learning from SAGE Journal Articles The Switch Image Lorenz Engell, 2021-04-22 Television is the most powerful system of images in the late 20th and early 21st centuries Nonetheless TV has attained only little philosophical attention so far especially compared to other visual media such as film This book looks at TV as what happens on the screen and beyond it which is mainly the operation of switching images It therefore proposes a new definition of TV as the first picture that can be switched on off and over which stresses that TV is more tactile than visual Through the operation of switching TV figures the world from within and as the course of its figuration This is grasped here by the term of ontography Through the ongoing interlacing and bridging of TV 1 0 the image is being switched and TV 2 0 the image is a switch TV exponentially increases the production and circulation of images It transforms the world and itself from an analogue state to a digital one and from central perspectivism to pluri perspective In terms of time through switching and the switch it develops and reworks new temporal orderings such as instantaneity synchronicity flow and seriality TV makes its own history In space it creates a mediasphere as its habitat and hence new forms of being in the world of proximity and distance and scale Anthropologically it works on what a subject and an object is on what makes the human being and ontographically how it is possible that there is something at all instead of nothing through switch images
