Weekly Ad This Week:

Nutritional Signaling Pathway Activities in Obesity and Diabetes Zhiyong Cheng, 2020-08-24 Nutrients can act as signalling molecules to initiate or mediate signalling transduction that regulates cell function and homeostasis. As such, altered nutrient status has been linked to dysregulated transcripts and protein expression which affects mitochondrial function, autophagy, inflammation, metabolism, and even gut microbiota. This book disseminates the cutting edge knowledge pertaining to nutritional signalling activities in metabolism and metabolic derangements e.g. obesity and diabetes which covers the regulatory mechanisms and dietary interventions for disease prevention. This book represents current nutritional and metabolic research. From the basic molecular science perspective, it covers metabolomics, proteomics, nutrigenomics, nuclear receptors and transcription factors, inflammatory pathways, autophagy, mitochondrial health, and gut microbiota. From the clinical translational science perspective, this book covers clinical trials, precision nutrition, maternal nutrition, and transgenerational health, and allometric scaling of dietary bioactives in translational metabolic research. It brings to the reader in depth understanding of the nutritional aspect, cellular and molecular biology, as well as pathophysiology of obesity and diabetes. In addition, each chapter in this book includes a component of future direction or intervention perspective, making the new knowledge transformative and translational. Aimed at researchers and professionals interested in nutrition, dietetics, and metabolic disorders, this book will also appeal to health science researchers. Geological Survey Bulletin, 1965

Initiation and Promotion in Skin Or Liver Neoplasia Edward B. Ilgren, 2024-12-06 Initiation and Promotion in Skin or Liver Neoplasia is the only source of its kind that presents a comprehensive compilation of in vivo initiation promotion studies that involve neoplastic changes in the skin or liver of experimental animals. The book surveys world literature over the past 65 years from almost 2 000 original studies covering nearly 200 journals in 9 languages. Publications reviewed consist of primary peer reviewed papers as well as those abstracts, meeting reports, and review articles containing original data. Papers measuring both pre neoplastic or neoplastic changes are included. The summaries for each study included in the book are highly formatted resumes that have four principal components which indicate: 1. What was done in the study; 2. How the study was done e.g. methods; 3. The precise results obtained; 4. Individual critiques using GLP Good Lab Practice standards. Initiation and Promotion in Skin or Liver Neoplasia provides an indispensable abstracted reference resource for scientists, toxicologists, cancer researchers, litigators, regulators, environmentalists, policy analysts, and industry based investigators.
