Subjects Fiona Walls, 2009-08-10 Teaching and learning mathematics is a political act in which children, teachers, parents and policy makers are made visible as subjects. As they learn about mathematics, children are also learning about themselves, who they are, who they might become. We can choose to listen or not to what children have to say about learning mathematics. Such choices constitute us in relations of power. Mathematical know-how is widely regarded as essential not only to the life chances of individuals but also to the health of communities and the economic well-being of nations. With the globalisation of education in an increasingly market-oriented world, mathematics has received intensified attention in the first decade of the twenty-first century with a shifting emphasis on utilitarian aspects of mathematics. This is reflected in the reconceptualisation of mathematical competence as mathematical literacy, loosely conceived as those ways of thinking, reasoning and working mathematically that allow us to engage effectively in everyday situations in many occupations and the cut and thrust of world economies as active, empowered and participatory citizens. It is no surprise then that mathematics has become one of the most politically charged subjects in primary school curricula worldwide. We are experiencing an unprecedented proliferation of regional and national strategies to establish benchmarks, raise standards, enhance achievement, close gaps and leave no child behind in mathematics education. Industries have sprung up around the design, administration and monitoring of standardised assessment to measure and compare children's mathematical achievement against identified benchmarks and each other. *Teaching Students With Autism Spectrum Disorders* Roger Pierangelo, George Giuliani, 2008-04-04 Gives general educators the precise information needed to work with children on the autistic spectrum. The range of topics covered makes this book a great resource for professionals looking for an overview of autism spectrum disorders and how to work effectively with this population. G. Richmond Mancil, Assistant Professor, University of Central Florida. Teachers in today's classrooms are faced with the challenge of educating all children. This book provides an easy-to-understand reference for a traditionally misunderstood disability. Vicki McFarland, Special Education Director, Learning Matters Educational Group. Create an appropriate learning environment to help children with ASD develop lifelong independence. Written by experts in special education and psychology, this user-friendly resource summarizes current research and presents a comprehensive overview of how to teach students with autism spectrum disorders (ASD).
