Pizzinelli,2025-04-04 There are competing narratives about artificial intelligence s impact on inequality Some argue AI will exacerbate economic disparities while others suggest it could reduce inequality by primarily disrupting high income jobs Using household microdata and a calibrated task based model we show these narratives reflect different channels through

which AI affects the economy Unlike previous waves of automation that increased both wage and wealth inequality AI could reduce wage inequality through the displacement of high income workers However two factors may counter this effect these workers tasks appear highly complementary with AI potentially increasing their productivity and they are better positioned to benefit from higher capital returns When firms can choose how much AI to adopt the wealth inequality effect is particularly pronounced as the potential cost savings from automating high wage tasks drive significantly higher adoption rates Models that ignore this adoption decision risk understating the trade off policymakers face between inequality and efficiency
