In multinationalen Unternehmen erhöht sich die Komplexität zur optimalen Steuerung durch interne und externe Einflüsse wie z.B. Währungsrisiken enorm. Aus der Vielzahl der Koordinationsinstrumente steht in dieser Arbeit der Lenkpreisansatz im Vordergrund, wobei die Ziele des Lenkpreisansatzes und die Ziele des Währungsmanagements unter der Berücksichtigung der Risikoeinstellung der Entscheidungsträger konzeptionell verknüpft werden. Das Koordinationskonzept beinhaltet neben der optimalen Steuerung der internationalen Leistungserstellung auch Überlegungen zum nutzenoptimalen Zentralisierungsgrad des Währungsmanagements.

Robotic Process Automation Christian Czarnecki, Peter Fettke, 2021-05-10 This book brings together experts from research and practice. It includes the design of innovative Robot Process Automation (RPA) concepts, the discussion of related research fields (e.g. Artificial Intelligence (AI)), the evaluation of existing software products and findings from real life implementation projects. Similar to the substitution of physical work in manufacturing (blue collar automation), Robotic Process Automation tries to substitute intellectual work in office and administration processes with software robots (white collar automation). The starting point for the development of RPA was the observation that despite the use of process oriented enterprise systems such as ERP, CRM and BPM systems additional manual activities are still indispensable today. In the RPA approach these manual activities are learned and automated by software robots either by defining rules or by observing manual activities. RPA is related to business process management, machine learning and artificial intelligence. Tools for RPA originated from dedicated stand alone software. Today RPA functionalities are also integrated into elaborated process management suites. From a conceptual perspective RPA can be structured into input components (sensors in the wide sense), an intelligence center and output components (actuators in the wide sense). From a strategic perspective the impact of RPA can be related to the support of existing tasks, the complete substitution of human activities and the innovation of processes as well as business models. At present high expectations are related to the use of RPA in the improvement of software supported business processes. Manual activities are learned and automated by software robots that interact with existing applications via the presentation layer. In combination with artificial intelligence (AI) as well as innovative interfaces (e.g. voice recognition) RPA creates a novel level of automation for office and administration processes. Its benefit potential reaches a return on investment (ROI) up to 800% that is documented in various case studies. *L.S.A., List of C.F.R. Sections Affected* Department of Agriculture (DoA) Staff, 2004 *Insurance World*, 1899 *Sinclair on Warranties and Indemnities on Share and Asset Sales* Robert Thompson, 2011 This practical text contains precedents and commentary on warranties and indemnities on share sales. It provides guidance for all parties (purchasers and vendors) who have to deal with a sale and purchase agreement (sale agreement) for either a company or business. Written for commercial lawyers, it is the only title to deal exclusively with this area. A CD-ROM of precedents is included.
