Sakhare, 2025-11-01 This book comprises select proceedings from the International Conference on Emerging Trends in Microelectronics Communication and Intelligent Systems ETMCIS 2024 It explores the synergies and intersections between engineering artificial intelligence microelectronics communication and signal processing The book showcases the forefront areas of research in engineering presenting readers with up to date insights and breakthrough discoveries It highlights the latest studies methodologies and experimental findings ensuring readers stay at the forefront of knowledge in these rapidly evolving fields The book emphasizes real world examples and implementation strategies to help readers grasp how these technologies can be leveraged to solve complex problems and improve existing systems **Scientific and Technical Aerospace Reports** ,1991 *Technical Abstract Bulletin* ,1964 **Nanoelectronic Coupled Problems Solutions** E. Jan W. ter Maten, Hans-Georg Brachtendorf, Roland Pulch, Wim Schoenmaker, Herbert De Gersem, 2019-11-06 Designs in nanoelectronics often lead to challenging simulation problems and include strong feedback couplings Industry demands provisions for variability in order to guarantee quality and yield It also requires the incorporation of higher abstraction levels to allow for system simulation in order to shorten the design cycles while at the same time preserving accuracy The methods developed here promote a methodology for circuit and system level modelling and simulation based on best practice rules

which are used to deal with coupled electromagnetic field circuit heat problems as well as coupled electro thermal stress problems that emerge in nanoelectronic designs This book covers 1 advanced monolithic multirate co simulation techniques which are combined with envelope wavelet approaches to create efficient and robust simulation techniques for strongly coupled systems that exploit the different dynamics of sub systems within multiphysics problems and which allow designers to predict reliability and ageing 2 new generalized techniques in Uncertainty Quantification UQ for coupled problems to include a variability capability such that robust design and optimization worst case analysis and yield estimation with tiny failure probabilities are possible including large deviations like 6 sigma 3 enhanced sparse parametric Model Order Reduction techniques with a posteriori error estimation for coupled problems and for UQ to reduce the complexity of the sub systems while ensuring that the operational and coupling parameters can still be varied and that the reduced models offer higher abstraction levels that can be efficiently simulated All the new algorithms produced were implemented transferred and tested by the EDA vendor MAGWEL Validation was conducted on industrial designs provided by end users from the semiconductor industry who shared their feedback contributed to the measurements and supplied both material data and process data In closing a thorough comparison to measurements on real devices was made in order to demonstrate the algorithms industrial applicability
