Micropropagation of Woody Plants M.R. Ahuja, 1992-11-30 This volume covers recent advances in the vegetative propagation of woody plants by tissue culture A wide range of topics relevant to micropropagation of woody plants are discussed by renowned international scientists These include cellular control of morphogenesis light regimes in tissue culture maturation and rejuvenation synthetic seed genetics of micropropagated plants haploid embryogenesis protoplast culture and acclimatization of ex vitro woody plants In addition to micropropagation of selected woody plants both gymnosperms and angiosperms this volume also includes in vitro genetic selection strategic planning for application of biotechnology for genetics and breeding and clonal options for woody plant improvement A balanced view of both perspectives and limitations of woody plant micropropagation is presented *Cryopreservation of Plant Germplasm II* L.E. Towill, Y.P.S. Bajaj, 2002-04-11

This volume highlights achievements in cryopreservation chronicles method development and describes relevant literature The provided detailed information helps practitioners develop and improve methods for desired species The volume is divided into four parts I Cryopreservation of Germplasm II Herbaceous Plants Barley celery chamomile chicory garlic ginseng hop horseradish mint taro wasabi III Woody Species Coffee Eucalyptus guazuma horse chestnut neem olive poplar oak Prunus Ribes rose IV Australian Species Initially cryopreservation was driven by the concern for loss of diversity of crops essential for continued improvement of the many plants used for food health and shelter The interest has been expanded by conservationists and their concerns for retaining the diversity of natural populations

Somatic Embryogenesis in Woody Plants S. Mohan Jain, Pramod P.K. Gupta, R.J. Newton, 1995-02-28 The quality of human life has been maintained and enhanced for generations by the use of trees and their products In recent years ever rising human population growth has put tremendous pressure on trees and tree products growing awareness of the potential of previously unexploited tree resources and environmental pollution have both accelerated development of new technologies for tree propagation breeding and improvement Biotechnology of trees may be the answer to solve the problems which cannot be solved by conventional breeding methods The combination of biotechnology and conventional methods such as plant propagation and breeding may be a novel approach to improving and multiplying in large number the trees and woody plants So far plant tissue culture technology has largely been exploited in the propagation of ornamental plants especially foliage house plants by commercial companies Generally tissue culture of woody plants has been recalcitrant However limited success has been achieved in tissue culture of angiosperm and gymnosperm woody plants A number of recent reports on somatic embryogenesis in woody plants such as Norway spruce *Picea abies* Loblolly pine *Pinus taeda* Sandalwood *Santalum album* Citrus Mango *Mangifera indica* etc offer a ray of hope of an inexpensive clonal propagation for large scale production of plants or seedlings or somatic embryo plants by protoplast work cryopreservation and genetic transformation and artificial or manufactured seed production

Plant Biotechnology and Molecular Markers S. Srivastava, A. Narula, 2004-04-30 The genesis of the volume *Plant Biotechnology and Molecular Markers* has been the occasion of the retirement of Professor Sant Saran Bhojwani from the Department of Botany University of Delhi For Professor Bhojwani retirement only means relinquishing the chair as being a researcher and a teacher which has

always been a way of life to him Professor Bhojwani has been an ardent practitioner of modern plant biology and areas like Plant Biotechnology and Molecular Breeding have been close to his heart The book contains original as well as review articles contributed by his admirers and associates who are experts in their area of research While planning this contributory book our endeavour has been to incorporate articles that cover the entire gamut of Plant Biotechnology and also applications of Molecular Markers Besides articles on in vitro fertilization and micropropagation there are articles on forest tree improvement through genetic engineering Considering the importance of conservation of our precious natural wealth one article deals with cryopreservation of plant material Chapter on molecular marker considers DNA indexing as markers of clonal fidelity of in vitro regenerated plants and prevention against bio piracy A couple of write ups also cover stage specific gene markers DNA polymorphism and genetic engineering including raising of stress tolerant plants to sustain productivity and help in reclamation of degraded land Agriculture Handbook ,2008-07 Berichte über Landwirtschaft ,1989
