Earthquake Microzoning Antoni Roca, Carlos Oliveira, 2012-12-06 In many past and recent earthquakes it has been shown that the local conditions and in particular the local geology have a great influence on the observed seismic ground motion and consequently on the damage distribution in housing industrial stock and life lines Seismic microzoning is the usual procedure to have these local effects taken into account for engineering design and land use planning being a useful tool for earthquake risk mitigation This volume presents a collection of papers mainly originated from a workshop on Seismic Microzoning organized during the 23rd General Assembly of the European Geophysical Society EGS in Nice France in April 1998 The workshop dealt with various geophysical tools for analysing the effects of the local soils of subsurface geology on seismic ground motion namely the methods using experimental data such as microtremors and the theoretical numerical 1 D and 2 D modelling methods Additional contributions discussing techniques for characterising soil properties microzoning applications to several urban areas and others were added to the volume to broaden this important topic

in the measurement of physiological rates for the computation of ecological fluxes The Working Group therefore recommended that an international meeting should be organized which would attempt to bring together theoretical ecologists and biological oceanographers to assess the present and future capability for measuring ecological fluxes and incorporating these data into models An approach was made to the Marine Sciences Panel of the NATO Science Committee who expressed an interest in funding such a meeting They awarded a planning grant and a planning group was formed consisting of M J R Fasham M V Angel T Platt R E The Cerebellum and Neural Control Masao Itō, 1984 **From Animals to Animats 3** Dave Cliff, 1994 August 8-12 1994 Brighton England From Animals to Animats 3 brings together research intended to advance the frontier of an exciting new approach to understanding intelligence The contributors represent a broad range of interests from artificial intelligence and robotics to ethology and the neurosciences Unifying these approaches is the notion of animat an artificial animal either simulated by a computer or embodied in a robot which must survive and adapt in progressively more challenging environments The 58 contributions focus particularly on well defined models computer simulations and built robots in order to help characterize and compare various principles and architectures capable of inducing adaptive behavior in real or artificial animals Topics include Individual and collective behavior Neural correlates of behavior Perception and motor control Motivation and emotion Action selection and behavioral sequences Ontogeny learning and evolution Internal world models and cognitive processes Applied adaptive behavior Autonomous robots Hierarchical and parallel organizations Emergent structures and behaviors Problem solving and planning Goal directed behavior Neural networks and evolutionary computation Characterization of environments A Bradford Book
