Mid-Atlantic Freshwater Wetlands: Advances in Wetlands Science, Management, Policy, and Practice Robert P. Brooks,Denice Heller Wardrop,2013-01-25 The lands and waters of the Mid Atlantic Region MAR have changed significantly since before the 16th century when the Susquehannock lived in the area Much has changed since Captain John Smith penetrated the estuaries and rivers during the early 17th century since the surveying of the Mason Dixon Line to settle border disputes among Maryland Pennsylvania and Delaware during the middle of the 18th century and since J Thomas Scharf described the physiographic setting of Baltimore County in the late 19th century As early as 1881 Scharf provides us with an assessment of the condition of the aquatic ecosystems of the region albeit in narrative form and already changes are taking place the conversion of forests to fields the founding of towns and cities and the depletion of natural resources We have always conducted our work with the premise that man is part of and not apart from this ecosystem and landscape This premise and the historical changes in our landscape provide the foundation for our overarching research question how do human activities impact the functioning of aquatic ecosystems and the ecosystem services that they provide and how can we optimize this relationship

Craft,2016-04-21 Boundaries of a wetland must be identified and located in the field by examining three parameters wetland plants wetland hydrology and hydric soils This book explains how wetland soils are formed described and can be identified in the field The new edition is a major revision of the 2000 book Written by scientists with extensive field and academic experience it contains 11 new chapters updates throughout and augments the previous material on wetland functions and restorations while maintaining the field oriented focus of the first book

Wetland and Stream Rapid Assessments John Dorney,Rick Savage,Ralph W Tiner,Paul Adamus,2018-08-07 *Wetland and Stream Rapid Assessments Development Validation and Application* describes the scientific and environmental policy background for rapid wetland and stream assessments how such assessment methods are developed and statistically verified and how they can be used in environmental decision making including wetland and stream permitting In addition it provides several case studies of method development and use in various parts of the world Readers will find guidance on developing and testing such methods along with examples of how these methods have been used in various programs across North America Rapid wetland and stream functional assessments are becoming frequently used methods in federal state and local environmental permitting programs in North America Many governments are interested in developing new methods or improving existing methods for their own jurisdictions This book provides an ideal guide to these initiatives Offers guidance for the use and evaluation of rapid assessments to developers and users of these methods as well as students of wetland and stream quality Contains contributions from sources who are successful in academia industry and government bringing credibility and relevance to the content Includes a statistically based approach to testing the validity of the rapid method which is very important to the usefulness and defensibility of assessment methods

Ashworth, 2019-08-09 Where can you find mosses that change landscapes salamanders with algae in their skin and carnivorous plants containing whole ecosystems in their furled leaves Where can you find swamp trompers wildlife watchers marsh managers and mud mad scientists In wetlands those complex habitats that play such vital ecological roles In *Wading Right In* Catherine Owen Koning and Sharon M Ashworth take us on a journey into wetlands through stories from the people who wade in the muck Traveling alongside scientists explorers and kids with waders and nets the authors uncover the inextricably entwined relationships between the water flows natural chemistry soils flora and fauna of our floodplain forests fens bogs marshes and mires Tales of mighty efforts to protect rare orchids restore salt marshes and preserve sedge meadows become portals through which we visit major wetland types and discover their secrets while also learning critical ecological lessons The United States still loses wetlands at a rate of 13 800 acres per year Such loss diminishes the water quality of our rivers and lakes depletes our capacity for flood control reduces our ability to mitigate climate change and further impoverishes our biodiversity Koning and Ashworth's stories captivate the imagination and inspire the emotional and intellectual connections we need to commit to protecting these magical and mysterious places

Tiner, 2016-12-19 Understand the current concept of wetland and methods for identifying describing classifying and delineating wetlands in the United States with *Wetland Indicators* capturing the current state of science's role in wetland recognition and mapping Environmental scientists and others involved with wetland regulations can strengthen their knowledge about wetlands and the use of various indicators to support their decisions on difficult wetland determinations Professor Tiner primarily focuses on plants soils and other signs of wetland hydrology in the soil or on the surface of wetlands in his discussion of *Wetland Indicators* Practicing and aspiring wetland delineators alike will appreciate *Wetland Indicators* critical insight into the development and significance of hydrophytic vegetation hydric soils and other factors Features Color images throughout illustrate wetland indicators Incorporates analysis and coverage of the latest Army Corps of Engineers delineation manual Provides over 60 tables including extensive tables of U S wetland plant communities and examples for determining hydrophytic vegetation

Indicators and Surrogates of Biodiversity and Environmental Change David Lindenmayer, Philip Barton, Jennifer Pierson, 2015-11-02 Ecological indicators and surrogates are used widely by resource managers to monitor and understand

complex biota and ecosystem processes Their potential to guide complex resource management has meant they have been proposed for use in all ecosystems worldwide Despite extensive research into indicators and surrogates there remains much controversy about their use in addition to major issues and knowledge gaps associated with their identification testing and application Indicators and Surrogates of Biodiversity and Environmental Change provides insights into the use of indicators and surrogates in natural resource management and conservation where to use them where not to use them and how to use them Using an ecological approach the chapters explore the development application and efficacy of indicators and surrogates in terrestrial aquatic marine and atmospheric environments The authors identify current gaps in knowledge and articulate the future directions for research needed to close those gaps This book is written by the world s leading thinkers in the area of indicators and surrogates It is the first major synthesis of learnings about indicators and surrogates and will be a critical resource for the vast number of people developing and applying them in ecosystems around the world It will be an essential resource for scientists policy makers and students with interests in surrogates and indicators *Water Quality* J. Kevin Summers, 2020-07-29 *Water Quality Science Assessments and Policy* examines many of the scientific issues national regional and local assessment practices and results and national policy issues related to water quality Chapters focus on three areas water quality parameters water quality treatments and water quality assessments This book provides a basic understanding of water quality issues and practical examples of their solution *Review of the New York City Watershed Protection Program* National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Water Science and Technology Board, Committee to Review the New York City Watershed Protection Program, 2021-01-04 New York City s municipal water supply system provides about 1 billion gallons of drinking water a day to over 8.5 million people in New York City and about 1 million people living in nearby Westchester Putnam Ulster and Orange counties The combined water supply system includes 19 reservoirs and three controlled lakes with a total storage capacity of approximately 580 billion gallons The city s Watershed Protection Program is intended to maintain and enhance the high quality of these surface water sources Review of the New York City Watershed Protection Program assesses the efficacy and future of New York City s watershed management activities The report identifies program areas that may require future change or action including continued efforts to address turbidity and responding to changes in reservoir water quality as a result of climate change
