Microorganisms In Environmental Management Microbes And Environment:

Microorganisms in Environmental Management Tulasi Satyanarayana, Bhavdish Narain Johri, Anil Prakash, 2012-01-03

Microbes and their biosynthetic capabilities have been invaluable in finding solutions for several intractable problems mankind has encountered in maintaining the quality of the environment. They have for example been used to positive effect in human and animal health genetic engineering environmental protection and municipal and industrial waste treatment. Microorganisms have enabled feasible and cost effective responses which would have been impossible via straightforward chemical or physical engineering methods. Microbial technologies have of late been applied to a range of environmental problems with considerable success. This survey of recent scientific progress in usefully applying microbes to both environmental management and biotechnology is informed by acknowledgement of the polluting effects on the world around us of soil erosion the unwanted migration of sediments chemical fertilizers and pesticides and the improper treatment of human and animal wastes. These harmful phenomena have resulted in serious environmental and social problems around the world problems which require us to look for solutions elsewhere than in established physical and chemical technologies. Often the answer lies in hybrid applications in which microbial methods are combined with physical and chemical ones. When we remember that these highly effective microorganisms cultured for a variety of applications are but a tiny fraction of those to be found in the world around us we realize the vastness of the untapped and beneficial potential of microorganisms. At present comprehending the diversity of hitherto uncultured microbes involves the application of metagenomics with several novel microbial species having been discovered using culture independent approaches. Edited by recognized leaders in the field this penetrating assessment of our progress to date in deploying microorganisms to the advantage of environmental management and biotechnology will be widely welcomed. Microbes for Sustainable Development and Bioremediation Ram Chandra, RC Sobti, 2019-12-13 Microbes are the predominant form of life on the planet due to their broad range of adaptation and versatile nutritional behavior. The ability of some microbes to inhabit hostile environments incompatible with most forms of life means that their habitat defines the extent of the biosphere and delineates the barrier between the biosphere and geosphere. The direct and indirect role of microbes that include bacteria, fungi, actinomycetes, viruses, mycoplasma, and protozoans are very much important in development of modern human society for food, drugs, textiles, agriculture, and environment. Furthermore, microorganisms and their enzyme systems are responsible for the degradation of various organic matters. Microbes for Sustainable Development and Bioremediation emphasizes the role of microbes for sustainable development of ecosystem. Environmental microbiology, role in biogeochemical cycle, and bioremediation of environmental waste is major theme which comprises the following aspects: Bacterial phytoextraction mechanism of heavy metals by native hyperaccumulator plants from complex waste contaminated site for eco restoration; Role of microbial enzyme for eco friendly recycling of industrial waste; Field scale remediation of crude oil contaminated desert soil and treatment technology; Microbial technology for metal recovery from e waste printed circuit board; Impact of genomic data on sustainability of ecosystem; Methane monooxygenases: their regulations and applications; Role of microbes in environmental sustainability and food preservation.
