Mixed-Effects Regression Models in Linguistics Dirk Speelman, Kris Heylen, Dirk Geeraerts, 2018-02-07 When data consist of grouped observations or clusters and there is a risk that measurements within the same group are not independent group specific random effects can be added to a regression model in order to account for such within group associations Regression models that contain such group specific random effects are called mixed effects regression models or simply mixed models Mixed models are a versatile tool that can handle both balanced and unbalanced datasets and that can also be applied when several layers of grouping are present in the data these layers can either be nested or crossed In linguistics as in many other fields the use of mixed models has gained ground rapidly over the last decade This methodological evolution enables us to build more sophisticated and arguably more realistic models but due to its technical complexity also introduces new challenges This volume brings together a number of promising new evolutions in the use of mixed models in linguistics but also addresses a number of common complications misunderstandings and pitfalls Topics that are covered include the use of huge datasets dealing with non linear relations issues of cross validation and issues of model selection and complex random structures The volume features examples from various subfields in linguistics The book also provides R code for a wide range of analyses Official Gazette of the United States Patent and Trademark Office United States. signed out there I had come to the conclusion that my colleagues in the Washington headquarters were likely enjoying second incomes from The Agency And so I moved back to the relatively cleaner business of strong drinks As managing director of United Distillers in Russia I am Mr Smirnoff Mr Johnnie Walker etc Very congenial company Also very politicized business During my lunchtime speech at the Davis Russian Research Center in Harvard a month ago I was trying to make the point to the handful of economists who had not yet left for vacation that the alcoholic beverages industry is as valid a barometer of the Russian political scene as oil and gas Fred Bergson who must be well into his 80s and was once upon a time the dean of American economists specializing in the Soviet Union seemed not to be buying into my message However he maintains a droll sense of humor and asked me at our introductory handshake whether I had learned anything during my stay at Harvard 25 years ago I told him I had learned to tend bar at Harvard Student Agencies and that this serves me well in my new business functions He seemed satisfied Email from Danny Gasman 14 July 1999 I meant to tell you that I laughed a lot when you told me about your lecture at Harvard They deserve even heavier doses of the truth You should keep a diary and publish it It could be a new edition of Radischev s Journey The long and short of mental time travel-- self-projection over time-scales large and small James M. Broadway, Claire M. Zedelius, Jonathan W. Schooler, Simon Grondin, 2015-07-02

Researchers working in many fields of psychology and neuroscience are interested in the temporal structure of experience as well as the experience of time at scales of a few milliseconds up to a few seconds as well as days months years and beyond This Research Topic supposes that broadly speaking the field of time psychology can be organized by distinguishing between perceptual and conceptual time scales Dealing with conceptual time mental time travel also called mental simulation self projection episodic semantic memory propection foresight allows humans and perhaps other animals to imagine and plan events and experiences in their personal futures based in large part on memories of their personal pasts as well as general knowledge Moreover contents of human language and thought are fundamentally organized by a temporal dimension enmeshed with it so thoroughly that it is usually expressible only through spatial metaphors But what might such notions have to do with experienced durations of events lasting milliseconds up to a few seconds during the so called present moment of perception action cycle time This Research Topic is organized around the general premise that by considering how mental time travel might scale down to time perception and vice versa no less progress and integrative synthesis within and across scientific domains might be facilitated Bipolar configurations of future and past orientations of the self may be repeated in parallel across conceptual and perceptual time scales subsumed by a general Janus like feedforward feedback system for goal pursuit As an example it is notable that the duality of propection and semantic episodic memory operating at conceptual time scales has an analogue in perception action cycle time namely the interplay of anticipatory attention and working memory Authors from all areas of psychology and neuroscience are encouraged to submit articles of any format accepted by the journal Original Research Methods Hypothesis Theory Reviews etc which might speak to questions about

time and temporal phenomena at long and or short time scales

Computational Creativity Research: Towards Creative Machines Tarek R. Besold, Marco Schorlemmer, Alan Smaill, 2014-12-04 Computational Creativity Concept Invention and General Intelligence in their own right all are flourishing research disciplines producing surprising and captivating results that continuously influence and change our view on where the limits of intelligent machines lie each day pushing the boundaries a bit further By 2014 all three fields also have left their marks on everyday life machine composed music has been performed in concert halls automated theorem provers are accepted tools in enterprises R D departments and cognitive architectures are being integrated in pilot assistance systems for next generation airplanes Still although the corresponding aims and goals are clearly similar as are the common methods and approaches the developments in each of these areas have happened mostly individually within the respective community and without closer relationships to the goings on in the other two disciplines In order to overcome this gap and to provide a common platform for interaction and exchange between the different directions the International Workshops on Computational Creativity Concept Invention and General Intelligence C3GI have been started At ECAI 2012 and IJCAI 2013 the first and second edition of C3GI each gathered researchers from all three fields presenting recent developments and results from their research and in dialogue and joint debates bridging the disciplinary boundaries The chapters contained in this book are based on expanded versions of accepted contributions to the workshops and additional selected contributions by renowned researchers in the relevant fields Individually they give an account of the state of the art in their respective area discussing both theoretical approaches as well as implemented systems When taken together and looked at from an integrative perspective the book in its totality offers a starting point for a re integration of Computational Creativity Concept Invention and General Intelligence making visible common lines of work and theoretical underpinnings and pointing at chances and opportunities arising from the interplay of the three fields
