Baron, 2026-01-20 What happens to human reading when AI bots

can do it for us Explosive developments in artificial intelligence have awed everyday users with the technology's ability to draw do computer coding and especially to write Those AI generated essays and poems legal briefs and responses to requests for information are all visible evidence of large language models at work What we don't see is the critical prior step before it can write AI needs to read While AI's written outcomes are remarkably similar to what a diligent student lawyer or researcher might produce AI doesn't read the way that humans do Now that AI is proving an adept reader what happens to our own reading skills and motivations especially at a time when both voluntary and school reading are increasingly on the decline We have learned that when we let chatbots write for us there are pros and cons to handing over our virtual pens It's critical that we also think through the consequences of relinquishing reading a deeply human activity to bots What do we stand to gain and lose when we let AI read for us Tracing the intersecting trajectories of AI and reading Reader Bot tackles this vital question revealing why we must be thoughtful about how we welcome AI as reader into our lives *HCI*
