Oracle Applications Performance Tuning Handbook Cd Rom Package:

Oracle SQL High-performance Tuning Guy Harrison, 1997 This is a comprehensive guide to writing SQL code that is optimized for performance. It includes a unique set of software tools on CD ROM for benchmarking SQL performance.

Oracle8 and UNIX Performance Tuning Ahmed Alomari, 1999 Oracle Senior Performance Engineer Ahmed Alomari covers virtually every relevant optimization technique in Oracle8, Oracle7 and three leading versions of UNIX: Solaris 2.6, HP-UX 11 and Sequent Dynix ptx 4.4. He presents in-depth coverage of both OLTP and DSS applications, covering optimization of the UNIX kernel, memory processors and I/O, and all these major Oracle8 performance enhancements.

Power Programming with RPC John Bloomer, 1992-02 Computer Systems Organization Computer Communication Networks

Oracle Built-in Packages Steven Feuerstein, Charles Dye, John Beresniewicz, 1998-05-01 Oracle is the most popular database management system in use today and PL/SQL plays a pivotal role in current and projected Oracle products and applications. PL/SQL is a programming language providing procedural extensions to the SQL relational database language and to an ever-growing number of Oracle development tools. Originally a rather limited tool, PL/SQL became with Oracle7 a mature and effective language for developers. Now with the introduction of Oracle8, PL/SQL has taken the next step towards becoming a fully realized programming language providing sophisticated object-oriented capabilities.

Steven Feuerstein's *Oracle PL/SQL Programming* is a comprehensive guide to building applications with PL/SQL. That book has become the bible for PL/SQL developers who have raved about its completeness, readability and practicality. Built-in packages are collections of PL/SQL objects built by Oracle Corporation and stored directly in the Oracle database. The functionality of these packages is available from any programming environment that can call PL/SQL stored procedures, including Visual Basic, Oracle Developer 2000, Oracle Application Server for web-based development and, of course, the Oracle database itself. Built-in packages extend the capabilities and power of PL/SQL in many significant ways. For example, DBMS_SQL executes dynamically constructed SQL statements and PL/SQL blocks of code. DBMS_PIPE communicates between different Oracle sessions through a pipe in the RDBMS shared memory. DBMS_JOB submits and manages regularly scheduled jobs for execution inside the database. DBMS_LOB accesses and manipulates Oracle8's large objects (LOBs) from within PL/SQL programs.

The first edition of *Oracle PL/SQL Programming* contained a chapter on Oracle's built-in packages, but there is much more to say about the basic PL/SQL packages than Feuerstein could fit in his first book. In addition, now that Oracle8 has been released, there are many new Oracle8 built-in packages not described in the PL/SQL book. There are also package extensions for specific Oracle environments such as distributed database; hence this book, *Oracle Built-in Packages*, pulls together information about how to use the calling interface (API) to Oracle's Built-in Packages and provides extensive examples on using the built-in packages effectively. The Windows diskette included with the book contains the companion guide, an online tool developed by RevealNet Inc. that provides point-and-click access to the many files of source code and online documentation developed by the authors.
