A Foundation Course for College Organic Chemistry B. S. Balaji, 2024-08-22 To understand and improve the underlying principles that govern how organic reactions occur A Foundation Course for College Organic Chemistry follows a brick by brick building approach Emphasis is given to interrelating experimental facts and findings with predictions mechanism and inferences results Discussions focus on clarifying how complex organic reactions occur which is based on electronegativity differences movement of electrons through framework or bonds and addition or removal of atoms hydrogen halogens or groups hydroxy amino The book begins with simple rules governing the deconstruction of reactions and applies them to explain how esterification amide and cyanide hydrolysis reactions proceed The importance of stereochemistry used in drug development biology and medicine aromatic electrophilic and nucleophilic substitutions reaction kinetics and dynamics is explained with suitable examples Features A systematic and structured approach is used to study all aspects of reactive intermediates generation structure geometry and reactions of carbocations carbanions and carbon free radicals This book incorporates scientific methods to deduce reaction mechanisms with simple and relevant explanations and limitations A proper explanation is given to understand the influence of functional groups on the stability and reactivity of intermediates pKa HSAB principles structure activity relations and how these can be exploited in organic chemistry Information is presented in an accessible way for students teachers researchers and scientists

 to the flood of conferences workshops panel discussions reports and research studies calling for change in the introductory
 science courses in our colleges and universities But there comes a time to move from criticism to action In 1993 the Division
 of Undergraduate Education of the National Science Foundation called for proposals for systemic initiatives to change the
 way int ductory chemistry is taught One of the five awards was to design develop and implement the peer led Workshop a
 new structure to help students learn science This book is a study of 15 years of work by the Peer Led Team Learning PLTL
 project a national consortium of faculty learning specialists and students The authors have been in the thick of the action as
 project evaluator Gafney and co principle investigator Varma Nelson Readers of this book will find a story of successful
 change in educational practice a story that continues today as new institutions faculty and disciplines adopt the PLTL model
 They will learn the model in theory and in practice and the supporting data that encourage others to adopt and adapt PLTL to
