New areas of focus include micro and macro scales molecular and genetic ecology and global ecology e.g. climate change earth transformations ecosystem services and the food water energy nexus are included. In addition new international experts in ecology contribute on a variety of topics. Offers the most broad ranging and comprehensive resource available in the field of ecology. Provides foundational content and suggests further reading. Incorporates the expertise of over 500 outstanding investigators in the field of ecology including top young scientists with both research and teaching experience. Includes multimedia resources such as an Interactive Map Viewer and links to a CSDMS Community Surface Dynamics Modeling System an open source platform for modelers to share and link models dealing with earth system processes.

Ecology J. L. Chapman, M. J. Reiss, 1998-12-10 Ecology Principles and Applications is a comprehensive textbook for A level students and first year undergraduates taking courses in biology geography and Earth sciences who require an introduction to ecology. Studies of human ecology are integrated into the text and the links to related disciplines are emphasised. The text begins with the ecology of individual organisms and moves on through communities and ecosystems to global considerations of biogeography co evolution and conservation. Case histories historical perspectives controversial theories and extension material are highlighted throughout the book. The second edition has been brought up to date with current syllabuses by the addition of further material on the key issue of conservation giving excellent coverage of the principles of conservation and using case studies to provide examples of conservation policies in practice. The authors are experienced teachers of ecology at sixth form and undergraduate level.
