signal e.g ECG or EEG acquired at the ear relate to the signal as acquired at the classical recording sites Which signals are ear centered systems sensitive to which signals are lost How can we reliably discriminate in real time signals from artifacts And finally how do we interpret data that is acquired over extended periods of time when we have little or no control over the recording environment For the sensing of physiological signals over extended periods of time dedicated sensor and amplifier technology is needed that is convenient to use robust and reliable People wearing these sensors should not be restricted in their activities Hence for long term usage sensor and amplifier technology need to be unobtrusive in every aspect the materials need to be biocompatible adjust to the individual s anatomy and be comfortable to wear They need to be sufficiently robust to allow for continued usage and self fitting and they need to be small and inconspicuous The electronic instrumentation including bio signal conditioners and amplifiers analog to digital converters means for signal processing and wireless transmission need to be sufficiently small and light weight to be placed at the ear together with the sensors The power supply has to be secured either by low power electronics or by smart ways to recharge the battery or even by harvesting body energy For the tiny signal changes as produced for example by brain activity amplifiers need to be sensitive enough to detect them while maintaining robust artifact rejection capabilities

Towards a neuroscience of social interaction Ulrich Pfeiffer, Bert Timmermans, Kai Vogeley, Chris Frith, Leonhard Schilbach, The burgeoning field of social neuroscience has begun to illuminate the complex biological bases of human social cognitive abilities However in spite of being based on the premise of investigating the neural bases of interacting minds the majority of studies have focused on studying brains in isolation using paradigms that investigate offline social cognition i e social cognition from a detached observer s point of view asking study participants to read out the mental states of others without being engaged in interaction with them Consequently the neural correlates of real time social interaction have remained elusive and may paradoxically represent the dark matter of social neuroscience More recently a growing number of researchers have begun to study online social cognition i e social cognition from a participant s point of view based on the assumption that there is something fundamentally different when we are actively engaged with others in real time social interaction as compared to when we merely observe them Whereas for offline social cognition interaction and feedback are merely a way of gathering data about the other person that feeds into processing algorithms inside the agent it has been proposed that in online social cognition the knowledge of the other at least in part resides in the interaction dynamics between the agents Furthermore being a participant in an ongoing interaction may entail a commitment toward being responsive created by important differences in the motivational foundations of online and offline social cognition In order to promote the development of the neuroscientific investigation of online social cognition this Frontiers Research Topic aims at bringing together contributions from researchers in social neuroscience and related fields whose work involves the study of at least two individuals and sometimes two brains rather than single individuals and brains responding to a social context Specifically this Research Topic will adopt an interdisciplinary perspective on what it is that separates online from offline social cognition and the putative differences in the recruitment of underlying processes and mechanisms Here an important focal point will be to address the various roles of social interaction in contributing to and at times constituting our awareness of other minds For this Research Topic we therefore solicit reviews original research articles opinion and method papers which address the investigation of social interaction and go beyond traditional concepts and ways of experimentation in doing so While focusing on work in the neurosciences this Research Topic also welcomes contributions in the form of behavioral studies

psychophysiological investigations methodological innovations computational approaches developmental and patient studies By focusing on cutting edge research in social neuroscience and related fields this Frontiers Research Topic will create new insights concerning the neurobiology of social interaction and holds the promise of helping social neuroscience to really go social Field & Stream ,2008-08 FIELD STREAM America s largest outdoor sports magazine celebrates the outdoor experience with great stories compelling photography and sound advice while honoring the traditions hunters and fishermen have passed down for generations **Aspen Plus** Kamal I.
