Living Donor Organ Transplantation Austen Garwood-Gowers, 2019-05-23 This book was originally published in 1999 When one or more essential organs failed the consequence used to be death However conventional medicine has developed artificial means of extending life the most successful of which is transplantation The most common form of organ to be transplanted is a kidney which will on average function for about a decade in its recipient Organ transplantation as a whole is widely practiced in most countries However few can procure enough organs to meet demand Many people who are suitable for a transplant die without getting one Many kidney patients can access and stay alive on dialysis until a suitable organ becomes available However even here sufficiency of organs would be beneficial because lesser reliance on dialysis would reduce healthcare costs and be better for patient quality of life This invaluable book shows that in the light of current practice and attitudes increasing living donor transplantation LDT levels is feasible It is one of the few works to systematically analyse the ethical and legal issues involved in LDT use in the light of empirical evidence including new data derived from a unique programme of interviews and questionnaires with transplant professionals living donors and recipients Readers are led to an understanding of when LDT is ethically and legally acceptable and to the strong case for using it much more extensively

Using the Bodies of the Dead Nora Machado, 2019-05-23. First published in 1998, this unique, timely book applies sociological concepts and analysis to the study of organ transplantation and related medical phenomena. It provides comparisons between differing transplantation systems and examines the ethical issues of organ transplantation, organ donation, and recipient selection. The author presents rich empirical materials and fertile theory with which to better understand a number of the current problems and developments related to organ transplantation and other high-tech medical developments. It also addresses important ethical issues. Dr. Nora Machado develops and applies an impressive range of new concepts and models in analyzing organ transplantation systems, the dissonance that appears to be endemic to these systems, the particular functions of a number of hospital roles, rituals, and discourses in dealing with such dissonance, and related conflict. The legal and normative regulation of body part extraction and allocation in large-scale systems, the cognitive and moral dilemmas which physicians, nurses, and next of kin face in the use of the bodies of the dead. Much of Dr. Machado's theoretical work is of a highly general value and should be of considerable interest even to those not engaged in issues of organ transplantation or bio-medical developments.

History Of Organ And Cell Transplantation Nadey S Hakim, Vassilios E Papalois, 2003-03-12. Organ transplantation is the greatest therapeutic advancement of the second half of the 20th century. Of all medical specialties, the pioneers of transplantation make up the largest number of experts awarded with or nominated for the Nobel Prize. Over the years, transplantation has fascinated the scientific community as well as the general public for a variety of reasons. The development of transplantation has involved almost all medical specialties. In the history of medicine, there is perhaps no other example of such extensive co-operation and exchange of knowledge and experience among basic scientists, surgeons, and physicians in achieving a common goal. The progress of transplantation has forced doctors to rewrite medical textbooks dealing with a great spectrum of post-transplantation issues, such as the physiology of transplanted organs, the recurrence of initial disease in the transplanted organs, and the complications arising from immunosuppressive drugs, infectious diseases, and cancer. Other issues raised concern maternity, child development, geriatric medicine, and ethical issues. However, the history of this amazing field of modern medicine has never been thoroughly reported in a detailed textbook. *History of Organ and Cell Transplantation* covers this area of modern literature. It includes a foreword written by Lady Jean Medawar, who is the wife of the late Sir Peter Medawar, Nobel Prize winner and first president of the International Transplantation Society.
