Tatlow, 2013-11-11 During the past fifteen years commercial interest in compounds containing carbon fluorine bonds has burgeoned beyond all expectations mainly owing to business opportunities arising from work on biologically active fluoroorganics particularly agrochemicals the relentless search for new markets for fluoropolymers and fluoro carbon fluids developments in the field of medical diagnostics and the drive to find replacements for ozone depleting CFCs and Halon fire extinguishing agents Judging the situation to warrant the publication of a comprehensive collection of up to date reviews dealing with commercial organofluorine compounds within a single volume of manageable size and hence reasonable cost we were delighted to be invited by Plenum Publishing Corporation to produce a suitable book In order to provide an authentic and wide ranging account of current commercial applications of fluoroorganic materials it clearly was necessary to assemble a sizeable team of knowledgeable contributing authors selected almost entirely from industry Through their efforts we have been able to produce an almost complete coverage of the modern organofluorochemicals business in a manner designed to attract a reader ship ranging from experts in the field through chemists and technologists currently unaware of the extent of industrial involvement with fluoroorganics to students of applied chemistry Promised chapters dedicated to perfluoroolefin oxides and ¹⁸F labeling of radiopharmaceuticals failed to materialize This is somewhat unfortunate in view of our aim to achieve comprehensive coverage of the subject *Introduction to Green Chemistry* Albert

This is a story of invention and chemistry and the ineluctable fate of the inventor of nylon Wallace Carothers was hired by DuPont in 1928 to lead a program called basic research Carothers brought a passion to his work and wanted to synthesize large molecules that would challenge Emil Fischer's largest molecule of 4200 molecular weight In a burst of creativity in the spring of 1930 Carothers gave us our first truly synthetic rubber and fiber The rubber quickly became neoprene the fiber in time led to nylon Carothers took an infant science called polymer chemistry defined it and guided it toward its present maturity He gave us condensation polymerization Hermes tells Carothers story his sudden dramatic research successes and his relentless slide into depression alcohol and suicide through Carothers revealing letters to his professional colleagues Roger Adams C S Marvel John R Johnson and his family and college classmates At the end Carothers habit was to hide himself from his co workers and friends Hermes narrative searches for the shrouded heart of the inventor's story by using stories of F Scott Fitzgerald and other contemporaries as parables from which Carothers truth may be drawn The
