Organizational Structure For Oil And Gas Companies:

Integrated Operations in the Oil and Gas Industry: Sustainability and Capability Development Rosendahl, Tom, 2012-08-31 The predicted ICT revolution has gained increasing attention in the oil industry the last few years It is enabled by the use of ubiquitous real time data collaborative techniques and multiple expertises across disciplines organizations and geographical locations Integrated Operations in the Oil and Gas Industry Sustainability and Capability Development covers the capability approach to integrated operations that documents research and development in the oil industry By capability we refer to the combined capacity and ability to plan and execute in accordance with business objectives through a designed combination of human skills work processes organizational change and technology This book will serve as a knowledge base for those who are interested in learning about and those involved in Integrated Operations in the Oil and Gas Industry

Iraq Oil and Gas Papers 2010 Muhammed Abed Mazeel, 2011 This book contains my articles from 2010 I have tried to examine some of the technical problems in the current oil and gas industry in Iraq In the geology geophysics and reservoir engineering section I used the available information and in some cases I estimate to fill the gap in the existing data International contracts usually differ from case to case or from field to field in Iraq TSC and PSC still have unclear contract conditions and public information is not enough for the detailed calculation needed for exact NPV and IRR Additional concerns are the cost estimation down structure and geopolitical strategies of Iraq The management of the existing oil and gas institutions in Iraq is one of the most urgent problems the country is facing The restructuring of companies and the Ministry of Oil is generally addressed in my articles I have also illustrated many possibilities for the restructuring and reorganization of the development of managerial and marketing systems In the rebuilding of the country and specially the oil and gas industry in Iraq there needs to be more investigation into how to optimize the exploitation of natural resources for better economic benefits for all parties the owner of the resources as well as International oil companies The close cooperation between the Ministry of Oil in Iraq and the IOC s and state oil should be open for reorganization and restructuring in order to benefit the entire country and to develop the process of integration in international markets

The Promotion of Good Industrial Relations in Oil and Gas Production and Oil Refining, 2002 Examines trends in oil and gas production and oil refining from 1980 to 2000 and considers restrictions on the freedom of association in those industries Describes key ILO instruments for the promotion of social dialogue and explores the processes of collective bargaining and social dialogue within the industries

Restructuring and Re-organization of the Iraqi Oil Ministry and State-owned Oil Companies for Maximum Economic Growth and National Development Muhammed Abed Mazeel, 2012 The first steps towards restructuring and reorganizing the institutions and legislation of the Iraqi oil and gas industry must include taking ownership of resources allocating acreages to Iraqi Kurdistan and neighbour states improving the transparency as well as governmental participation and fiscal principles It is important to provide an institutional

framework that governs the operations of the industry including its functions structure powers and funding Operations in the upstream of the industry comprise licenses leases and contracts Other considerations covered are award processes right of governmental participation marginal fields indigenous companies termination and revocation of both licenses and leases matters on fees rents and royalties and finally provisions on Associated Natural Gas The legislation in the downstream sector focuses on licensing refining marketing and pricing of oil products transport logistics and facility management companies pipelines and depots The operating stocks and Iraq strategic stocks are also necessary The needs of the downstream natural gas include both technical and commercial licensing regulations and conditions as the network gas supply licenses transportation pipelines licenses and the whole sale market in addition to the possibility of third party access customer protection the pricing regime public service obligations competition and market regulation The legislation is an amendment to the existing Iraqi Technical Service Contracts TSC and Production Sharing Contracts Agreements PSC in Iraqi Kurdistan based on the need to create a new fiscal framework that takes various compelling issues into consideration It needs to capture the full gas value chain for taxation purposes in order to develop a fiscal regime for gas removed from oil and to create thereby a level playing field for all investors in gas and promoting the effective management of costs across the industry which in turn will maximize the government s take Other considerations revolve around the requirement to develop a fiscal system which responds to changes in price and to clarify inconsistencies or conflicts in the application of fiscal terms for oil and gas and finally to develop a fiscal rule of general application based on a body of expected fiscal laws Quality health safety and environment are missing elements in Iraq During the restructuring and reorganization of the institutions the QHSE should take on a major role in working with the aforementioned departments in the Oil Ministry and the operating companies The obligations of the state and international oil companies towards the state environmental regulations and public rules must be upheld according to the licensees lessees and contractors considering matters of abandonment decommissioning and disposal and their funding The various actors in the oil and gas production are obligated towards various communities in the oil producing region of the country with supporting community development providing employment opportunities compensation infrastructure protection and management of the environment as essential components The Ministry of Oil remains a civil service outfit that is ill equipped to conceive and enact the required policies for such a complex and sophisticated industry Hence there is a strong need for principal and basic interaction between Federal Oil Ministry existing directorial and state oil companies Kurdistan Ministry of Energy and Natural Resources and private sector operatives This applies also to the reorganization and restructuring of Federal Oil Ministry existing directorial and state oil companies Iraqi National Oil Company and Iraqi National Gas Company

State of the Oil and Gas Industry
 United States. Congress. Senate. Committee on Energy and Natural Resources,1993 China's Energy Revolution in the Context of the Global Energy Transition Shell International B.V.,Development Research Center DRC,2020-05-29 This open

access book is an encyclopaedic analysis of the current and future energy system of the world's most populous country and second biggest economy. What happens in China impacts the planet. In the past 40 years, China has achieved one of the most remarkable economic growth rates in history. Its GDP has risen by a factor of 65, enabling 850 000 people to rise out of poverty. Growth on this scale comes with consequences. China is the world's biggest consumer of primary energy and the world's biggest emitter of CO₂ emissions. Creating a prosperous and harmonious society that delivers economic growth and a high quality of life for all will require radical change in the energy sector and a rewiring of the economy more widely. In *China's Energy Revolution in the Context of the Global Energy Transition*, a team of researchers from the Development Research Center of the State Council of China and Shell International examine how China can revolutionise its supply and use of energy. They examine the entire energy system: coal, oil, gas, nuclear, renewables and new energies in production, conversion, distribution and consumption. They compare China with case studies and lessons learned in other countries. They ask which technology, policy and market mechanisms are required to support the change and they explore how international cooperation can smooth the way to an energy revolution in China and across the world. And they create and compare scenarios on possible pathways to a future energy system that is low carbon, affordable, secure and reliable.

Stratigraphic reservoir characterization for petroleum geologists, geophysicists, and engineers Roger M. Slatt, 2006-11-03. Reservoir characterization as a discipline grew out of the recognition that more oil and gas could be extracted from reservoirs if the geology of the reservoir was understood. Prior to that, awakening reservoir development and production were the realm of the petroleum engineer. In fact, geologists of that time would have felt slighted if asked by corporate management to move from an exciting exploration assignment to a more mundane assignment working with an engineer to improve a reservoir's performance. Slowly, reservoir characterization came into its own as a quantitative multidisciplinary endeavor requiring a vast array of skills and knowledge sets. Perhaps the biggest attractor to becoming a reservoir geologist was the advent of fast computing followed by visualization programs and theaters all of which allow young geoscientists to practice their computing skills in a highly technical work environment. Also, the discipline grew in parallel with the evolution of data integration and the advent of asset teams in the petroleum industry. Finally, reservoir characterization flourished with the quantum improvements that have occurred in geophysical acquisition and processing techniques and that allow geophysicists to image internal reservoir complexities.

Upstream Oil and Gas in Ghana Thomas Kojo Stephens, 2023-05-12. This book explores the myriad issues that play out in the upstream petroleum industry of Ghana from a legal perspective. Focusing on Ghana as an emerging petroleum country, Thomas Kojo Stephens begins by examining whether the existing constitutional framework will be effective in governing the expanding oil and gas sector. Drawing on various approaches proffered by other experts in the field, Stephens looks at possible institutional structures that could be put in place and juxtaposes these ideas with the experience of Ghana to test the efficacy of these proposals. He also explores the types of contractual frameworks currently

implemented in Ghana for comparison with other emerging petroleum economies examining the barriers to effectiveness novel provisions that must be incorporated and lessons learned from other regions Finally the book highlights how vital it is for the Ghanaian State to monitor the use of petroleum revenue and make ethical investment decisions that prioritize the interests of Ghanaian citizens Upstream Oil and Gas in Ghana will be of great interest to students and scholars of energy law and policy oil and gas management and African Studies more broadly as well as those working in the upstream petroleum industry
