Breaking Away Maurice E. Stucke, 2022 Breaking Away sounds a warning call alerting readers that their privacy and autonomy concerns are indeed warranted and the remedies deserve far greater attention than they have received from our leading policymakers and experts to date Through the various prisms of economic theory market data policy and law the book offers a clear and accessible insight into how a few powerful firms Google Apple Facebook Meta and Amazon have used the same anticompetitive playbook and manipulated the current legal regime for their gain at our collective expense While much has been written about these four companies power far less has been said about addressing their risks In looking at the proposals to date however policymakers and scholars have not fully addressed three fundamental issues First will more competition necessarily promote our privacy and well being Second who owns the personal data and is

that even the right question Third what are the policy implications if personal data is non rivalrous Breaking Away not only articulates the limitations of the current enforcement and regulatory approach but offers concrete proposals to promote competition without having to sacrifice our privacy This book explores how these platforms accumulated their power why the risks they pose are far greater than previously believed and why the tools need to be far more robust than what is being proposed Policymakers scholars and business owners managers and entrepreneurs seeking to compete and innovate in the digital platform economy will find the book an invaluable source of information

Protecting EU Consumers in Internet of Things Ecosystems Christof Koolen, 2025-10-21 The number of devices being connected to the internet is growing rapidly This trend referred to as the Internet of Things IoT reflects the gradual transformation of everyday objects into smart devices These smart devices are capable of collecting data from their surroundings and sharing that data over the internet As a result the development of the IoT raises extensive legal questions from a consumer protection perspective First the functionality of smart devices challenges consumer autonomy and the average consumer's ability to make well informed transactional decisions Second concerns remain about consumer choice as consumers can't easily switch due to interoperability limitations Third consumer privacy is threatened by the data driven nature of the IoT Protecting EU Consumers in Internet of Things Ecosystems explores solutions to these challenges by critically analyzing the interplay between EU consumer law EU competition law and EU data privacy law aiming to balance innovation and consumer protection in IoT ecosystems At a time when society must question how the benefits of IoT can be harnessed for the greater good rather than posing a threat to consumers businesses and governments this volume offers valuable insights for academics policymakers businesses and anyone interested in understanding the impact of technology on our daily lives
