China's Way to Carbon Emissions Reduction Ying Shen, 2015-08-18 Now that the most recent scientific estimates have shown that China has become the world's largest source of greenhouse gas emissions China's influence on the world's environment and sustainable development highlights the importance of tailoring Chinese climate change law to conform with the requirements of international conventions and agreements on climate change This thorough analysis based on an

examination of climate status legal background and current regulatory systems in China examines the potential role of different policy instruments in reducing carbon emissions in order to find an appropriate choice for China and recommends approaches to key issues for relevant authorities The author conducts a comprehensive and in depth study on the three mainstream environmental policy instruments used to control carbon emissions the cap and trade system the carbon tax and command and control regulations in a Chinese context She reviews China s current policies and elucidates how the issues of climate change and global warming call for social environmental economic and legal reforms in China especially in the areas of administrative law and property rights law Among the issues and topics covered are the following key issues on designing and implementing each of the three policy instruments the choice of regulatory instruments for carbon emissions reduction in a socialist market economy based on the discussion of market failure and government failure theories legal challenges from China s current administrative legislation and the definition of carbon emissions entitlements practical effect of China s climate change policy at the national provincial and local levels effectiveness of China s implementation of its international obligations lessons learned from schemes implemented in the United States and Australia comparison of China s seven regional pilot emissions trading scheme ETS programmes with the well established EU ETS linkage between China s ETS and other ETSs from a global perspective and future direction of an emerging carbon market in China The analysis assesses the critical costs and benefits of each approach in the context of selected case studies taking legal literature in the field fully into account Given that the Chinese government is taking steps to reduce emissions by altering energy production and usage and is signalling a willingness to make similar commitments in a multilateral treaty it is very timely and important for lawmakers and scholars within and outside China to think about new and appropriate regulatory measures to respond to the crisis and plan for a sustainable future This study provides not only a useful benchmark for both China and other countries in formulating initiatives on enhancing climate protection but also details the global implications for governments and for international organizations concerned with the understanding between China and the rest of the world in the context of climate change mitigation

The Science of Free Will Samir Varma, 2025-02-25 Every individual from the most profound thinker to the casual observer is composed of atoms approximately 6.71×10^{27} of them These aren t just any atoms they re the same ones that construct galaxies stars and the vast expanse of the universe Predominantly we re made of water molecules and a diverse mix of organic molecules Intriguingly every single one of these atoms operates under the deterministic laws of quantum electrodynamics These laws known since the 1950s form the bedrock of chemistry biology and by extension life as we know it If the laws of physics fully determine the motion of every atom in our body how could we possibly have free will or do we have it after all
