Limbewig Emmerson, Parker, 2023-06-13 This work is an attempt to describe various branches of mathematics and the analogies between them Namely 1 Symbolic Analogic 2 Lateral Algebraic Expressions 3 Calculus of Infinity Tensors Energy Number Synthesis 4 Perturbations in Waves of Calculus Structures Group Theory of Calculus 5 Algorithmic Formation of Symbols Encoding Algorithms The analogies between each of the branches and most certainly other branches of mathematics form logic vectors Forming vector statements of logical analogies and semantic connections between the differentiated branches of mathematics is useful It s useful because it gives us a linguistic notation from which we can derive other insights These combined insights from the logical vector space connections yield a combination of Numeric Energy and the logic space Thus I have derived and notated many of the most useful tangent ideas from which even more correlations and connections can be drawn Using AI these branches can be used to form even more connections through training of language engines on the derived models Through the vector logic space and the discovery of new sheaf Limbewig vast combinations of novel mathematical statements are derived This paves the way for an AGI that is not rigid but flexible like a Limbewig The Limbewig sheaf is open meaning it can receive other mathematical logic vectors with different designated meanings of infinite or finite indicated elements Furthermore the articulation of these syntax forms evolves language away from imperative statements into a mathematically emotive space Indeed shown within we see how the supramanifold of logic is shared with the supramanifold of space time mathematically Developing clean mathematical spaces can help meditation thought process acknowledgment of ideas spoken into that cognitive spacetime and in turn methods by which paradoxes can be resolved linguistically This toolkit should be useful to all in the sciences as well as those bridging the humanities to mathematics Using our memories as a toolkit to aggregate these ideas breaks down boundaries between them in a new exciting way Merging philosophy and Quantum Mechanics together through the lens of symbolic analogies gives the tools to unravel this mystery of all mysteries Mathematics thus exists as a bridge albeit a complex one between the two disciplines giving life to a composite art of problem solving Furthermore mathematics yields to millions of other applications that are potentially limited only by our imagination From massive data sets used for predictive analytics to emerging fields in medicine mathematics is an energy and force at the center of possibilities The power of mathematics to help manage life exists in its ability to shape and model the world in which we live and interact with one another In conclusion mathematics is a powerful tool that creates bridges and connections between many disciplines and serves as a powerful form of analytical
