Medical Devices and the Public's Health Institute of Medicine, Board on Population Health and Public Health Practice, Committee on the Public Health Effectiveness of the FDA 510(k) Clearance Process, 2011-10-25 Medical devices that are deemed to have a moderate risk to patients generally cannot go on the market until they are cleared through the FDA 510 k process In recent years individuals and organizations have expressed concern that the 510 k process is neither making safe and effective devices available to patients nor promoting innovation in the medical device industry Several high profile mass media reports and consumer protection groups have profiled recognized or potential problems with medical devices cleared through the 510 k clearance process The medical device industry and some patients have asserted that the process has become too burdensome and is delaying or stalling the entry of important new medical devices to the market At the request of the FDA the Institute of Medicine IOM examined the 510 k process Medical

Devices and the Public's Health examines the current 510 k clearance process and whether it optimally protects patients and promotes innovation in support of public health. It also identifies legislative regulatory or administrative changes that will achieve the goals of the 510 k clearance process. Medical Devices and the Public's Health recommends that the U.S. Food and Drug Administration gather the information needed to develop a new regulatory framework to replace the 35-year-old 510 k clearance process for medical devices. According to the report, the FDA's finite resources are best invested in developing an integrated premarket and postmarket regulatory framework.

Federal Register, 2012-08 [Advancing the Discipline of Regulatory Science for Medical Product Development](#)

National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Sciences Policy, Forum on Drug Discovery, Development, and Translation, 2016-08-11. The field of endeavors known as regulatory science has grown out of the need to link and integrate knowledge within and among basic science research, clinical research, clinical medicine, and other specific scientific disciplines whose focus aggregation and ultimate implementation could inform biomedical product development and regulatory decision making. Substantial efforts have been devoted to defining regulatory science and communicating its value and role across the scientific and regulatory ecosystems. Investments are also being made in technology infrastructure, regulatory systems, and workforce development to support and advance this burgeoning discipline. In October 2015, the National Academies of Sciences, Engineering, and Medicine held a public workshop to facilitate dialogue among stakeholders about the current state and scope of regulatory science, opportunities to address barriers to the discipline's success, and avenues for fostering collaboration across sectors. Participants explored key needs for strengthening the discipline of regulatory science, including considering what are the core components of regulatory science infrastructure to foster innovation in medical product development. This report summarizes the presentations and discussions from the workshop.
