Biotechnology for Medicinal Plants Suman Chandra, Hemant Lata, Ajit Varma, 2012-08-10 Plant based medicines play an important role in all cultures and have been indispensable in maintaining health and combating diseases. The identification of active principles and their molecular targets from traditional medicine provides an enormous opportunity for drug development. Using modern biotechnology plants with specific chemical compositions can be mass propagated and genetically improved for the extraction of bulk active pharmaceuticals. Although there has been significant progress in the use of biotechnology using tissue cultures and genetic transformation to investigate and alter pathways for the biosynthesis of target metabolites, there are many challenges involved in bringing plants from the laboratory to successful commercial cultivation. This book presents the latest advances in the development of medicinal drugs including topics such as plant tissue cultures, secondary metabolite production, metabolomics, metabolic engineering, bioinformatics, and future biotechnological directions.

Bioactive Molecules and Medicinal Plants Kishan Gopal Ramawat, Jean-Michel Mérillon, 2008-01-16 This book on medicinal plant biotechnology covers recent developments in this field. It includes a comprehensive up to date survey on established medicinal plants and on molecules which gained importance in recent years. No recently published book has covered these carefully selected topics. The contributing scientists have been selected on the basis of their involvement in the related plant material as evident by their internationally recognised published work.

Plant Biotechnology and Molecular Markers S. Srivastava, A. Narula, 2004-04-30 The genesis of the volume *Plant Biotechnology and Molecular Markers* has been the occasion of the retirement of Professor Sant Saran Bhojwani from the Department of Botany, University of Delhi. For Professor Bhojwani, retirement only means relinquishing the chair as being a researcher and a teacher, which has always been a way of life to him. Professor Bhojwani has been an ardent practitioner of modern plant biology, and areas like Plant Biotechnology and Molecular Breeding have been close to his heart. The book contains original as well as review articles contributed by his admirers and associates who are experts in their area of research. While planning this contributory book, our endeavour has been to incorporate articles that cover the entire gamut of Plant Biotechnology and also applications of Molecular Markers. Besides articles on in vitro fertilization and micropropagation, there are articles on forest tree improvement through genetic engineering. Considering the importance of conservation of our precious natural wealth, one article deals with cryopreservation of plant material. Chapter on molecular marker considers DNA indexing as markers of clonal fidelity of in vitro regenerated plants and prevention against bio piracy. A couple of write ups also cover stage specific gene markers, DNA polymorphism, and genetic engineering, including raising of stress tolerant plants to sustain productivity and help in reclamation of degraded land.

Biotechnological Approaches for Medicinal and Aromatic Plants Nitish Kumar, 2018 For the majority of the world's population, medicinal and aromatic plants are the most important source of life

saving drugs Biotechnological tools represent important resources for selecting multiplying and conserving the critical genotypes of medicinal plants In this regard in vitro regeneration holds tremendous potential for the production of high quality plant based medicines while cryopreservation a long term conservation method using liquid nitrogen provides an opportunity to conserve endangered medicinal and aromatic plants In vitro production of secondary metabolites in plant cell suspension cultures has been reported for various medicinal plants and bioreactors represent a key step toward the commercial production of secondary metabolites by means of plant biotechnology Addressing these key aspects the book contains 29 chapters divided into three sections Section 1 In vitro production of secondary metabolites Section 2 In vitro propagation genetic transformation and germplasm conservation Section 3 Conventional and molecular approaches

Medicinal Plant Biotechnology, 2 Volume Set Oliver Kayser, Wim J. Quax, 2007 This unique overview of plants and transgenic techniques of great scientific medicinal and economic value for both industry and academia covers the whole spectrum from cell culture techniques via genetic engineering and secondary product metabolism right up to the use of transgenic plants for the production of bioactive compounds Practical examples are given throughout including the production of cancer therapeutics functional food and flavor compounds in plants Of particular interest to the pharmaceutical and biotechnological industries as well as medicinal chemists biochemists and molecular biologists
