Megaflooding on Earth and Mars Devon M. Burr, Victor R. Baker, Paul A. Carling, 2009-09-24 A research summary of the causes and effects of megaflooding on Earth and Mars for hydrologists planetary scientists and engineers

Snow and Ice-Related Hazards, Risks, and Disasters Wilfried Haeberli, Colin Whiteman, 2021-02-12 Snow and Ice Related Hazards Risks and Disasters Second Edition provides you with the latest scientific developments in sea level rise permafrost degradation rock ice avalanches glacier surges glacial lake outburst floods ice shelf collapses climate change implications causality impacts preparedness and mitigation The book takes a geo scientific approach to the topic while also covering current thinking about directly related social scientific issues that can affect ecosystems and global economies Special emphasis is placed on the rapidly progressing effects from global warming on the cryosphere perspectives for the future and latest scientific advances and technological developments Presents the latest research on causality glacial surges ice shelf collapses sea level rise climate change implications and more Contains numerous tables maps diagrams illustrations and photographs of hazardous processes Features new insights on the implications of climate change including increased melting collapsing flooding methane emissions and sea level rise

Palaeohydrology Jürgen Herget, Alessandro Fontana, 2019-06-29 The book provides a review of the most relevant topics on the booming discipline of palaeohydrology and focuses on previous extreme events like exceptional floods and droughts Reviews written by leading experts of their fields are combined with selected key studies and presentations on up to day methodical and conceptional topics as a perspective for further research Consequently the compilation provides an excellent review on the state of the art of numerous relevant topics of palaeohydrology and acts as unique introduction for early career scientists and scientists of different disciplines working on hydrological extreme events both in basic research and applied aspects

Flood Reconstruction Jürgen Herget, 2024-10-22 Floods are among the most common and consequential natural disasters on Earth occurring in all natural areas at all times Yet they often surprise us with their unexpected magnitude and the damage they cause Terms like century and millennium floods quickly become widespread but what do we really know about the floods of the past How can we truly classify events like the Mississippi flood of 1993 the Elbe flood of 2002 or the Pakistan flood of 2010 Have such floods occurred before or are they unprecedented perhaps even consequences of ongoing climate change To answer these questions we must look into the past However river level records are often limited in duration rarely extending back more than a hundred years and many regions lack any measured values at all Nonetheless floods have left their marks These marks may exist in the form of historical records and descriptions which vary in extent across different cultural contexts In addition to historical records natural indicators like deposited sediments or erosion traces provide valuable information about past flood levels This is particularly important for prehistoric periods and for regions without dense settlements and related gauges These investigations lead to further questions about maximum flood levels and the earliest recorded observations This book

addresses these questions by exploring the reconstruction of floods from both historical and prehistoric times It explains and discusses methods and results for beginners with diverse backgrounds in disciplines such as earth sciences hydrology history and engineering Extensive and carefully selected reference lists offer access to additional information

Encyclopedia of Quaternary Science Cary Mock, 2013-03-25 The second revised edition of the Encyclopedia of Quaternary Science Four Volume Set provides both students and professionals with an up to date reference work on this important and highly varied area of research There are lots of new articles and many of the articles that appeared in the first edition have been updated to reflect advances in knowledge since 2006 when the original articles were written The second edition will contain about 375 articles written by leading experts around the world This major reference work is richly illustrated with more than 3 000 illustrations most of them in colour Research in the Quaternary sciences has advanced greatly in the last 10 years especially since topics like global climate change geologic hazards and soil erosion were put high on the political agenda This second edition builds upon its award winning predecessor to provide the reader assured quality along with essential updated coverage Contains 357 broad ranging articles 4310 pages written at a level that allows undergraduate students to understand the material while providing active researchers with a ready reference resource for information in the field Facilitates teaching and learning The first edition was regarded by many as the most significant single overview of Quaternary science ever yet Editor in Chief Scott Elias has managed to surpass that in this second edition by securing even more expert reviews whilst retaining his renowned editorial consistency that enables readers to navigate seamlessly from one unfamiliar topic to the next

Gravel-Bed Rivers Daizo Tsutsumi, Jonathan B. Laronne, 2017-07-05 With contributions from key researchers across the globe and edited by internationally recognized leading academics Gravel bed Rivers Processes and Disasters presents the definitive review of current knowledge of gravel bed rivers Continuing an established and successful series of scholarly reports this book consists of the papers presented at the 8th International Gravel bed Rivers Workshop Focusing on all the recent progress that has been made in the field subjects covered include flow physical modeling sediment transport theory techniques and instrumentation morphodynamics and ecological topics with special attention given to aspects of disasters relevant to sediment supply and integrated river management This up to date compendium is essential reading for geomorphologists river engineers and ecologists river managers fluvial sedimentologists and advanced students in these fields

Rivers in Rock Kenneth Hewitt, 2025-03-05 This richly illustrated book is both a visitor's guide to one of southwestern Ontario's most striking landforms the Elora Gorge on the Upper Grand River and a thorough accessible introduction to its natural and recent human history The book introduces rivers that flow in bedrock between rock walls and through precipitous gorges unlike the subdued terrain that the last Ice Age bequeathed most of southwestern Ontario It then leads the visitor to three viewpoints on and three excursions through the gorge with a wealth of information about its rocks fossils caves cliffs rockslides rockfalls floods and erosional processes It takes the reader through

five ages of the gorge In the First Age the gorge bedrock originated as reef limestone 430 million years ago in prehistoric tropical seas The Second Age saw the gorge rocks make a great 400 million year journey from tropical seas to the heart of a continent via plate tectonics In the Third Age the retreating Laurentide Ice Sheet created conditions 17 000 to 15 000 years ago in which ice lobes glacial lakes and meltwater spillways interacted to incise the gorge in an ice free area known as the Ontario Island In the Fourth Age the gorge nestled in an immense forest developed at a slower pace moderated by dense woods fallen branches and beaver dams In the Fifth Age the gorge entered the Anthropocene as European settlers came to disrupt and dominate its development and unlock its secrets Full of original photographs maps and diagrams Rivers in Rock is an authoritative guide to the Elora Gorge that will fascinate visitors and researchers alike River, Coastal and Estuarine Morphodynamics: RCEM 2007, Two Volume Set C. Marjolein Dohmen-Janssen, Suzanne J.M.H. Hulscher, 2019-08-22 This book brings together contributions from some 200 scientists from more than 20 countries who present and discuss the latest scientific research developments on this topic It is organized around the general themes of relations between scales and long term morphodynamics such as biogeomorphology small scale processes and grain sorting morphodynamic free behavior human interferences in morphodynamics The book provides an excellent overview of the state of the art knowledge on River Coastal and Estuarine Morphodynamics and will be of interest to academics engineers planners national and local authorities and all those involved in managing river estuarine and coastal habitats Mars Geological Enigmas Richard Soare, Susan Conway, Jean-Pierre Williams, Dorothy Oehler, 2021-05-23 Mars Geological Enigmas From the Late Noachian Epoch to the Present Day presents outstanding questions on the geology of Mars and divergent viewpoints based on varying interpretations and analyses The result is a robust and comprehensive discussion that provides opportunities for planetary scientists to develop their own opinions and ways forward Each theme opens with an introduction that includes background on the topic and lays out questions to be addressed Alternate perspectives are covered for each topic including methods observations analyses and in depth discussion of the conclusions Chapters within each theme reference each other to facilitate comparison and deeper understanding of divergent opinions Offers a transchronological view of the geological history of Mars addressing thematic questions from a broad temporal perspective Discusses outstanding questions on Mars from diverging perspectives Includes key questions and answers as well as a look ahead to which puzzles remain to be solved Large Rivers Avijit Gupta, 2022-03-28 An updated treatment of management and geomorphology of large rivers around the world The newly revised Second Edition of Large Rivers Geomorphology and Management delivers a thoroughly updated exploration of the form and function of major rivers The book brings together a set of papers on the large rivers of the world offering readers an insightful examination of a demanding subject The new Second Edition of the book includes fully updated and revised chapters as well as two entirely new chapters on the Ayeyarwady and the Arctic rivers This fascinating volume describes the environmental requirements for creating and maintaining a major river system case studies on over a dozen

large rivers from different continents in a variety of physical environments and the measurement and management of large rivers Unmatched in scope Large Rivers sheds light on a subject lacking in comprehensive study Readers will benefit from the inclusion of A thorough introduction to the geology of large river systems hydrology and discharge transcontinental moving and storage of sediment and the greatest floods and largest rivers An exploration of the classification architecture and evolution of large river deltas Discussions of sedimentology and stratigraphy of large river deposits including their recognition in the ancient record and the distinction from incised valley fills An examination of the effects of tectonism climate change and sea level change on the form and behavior of the modern Amazon river and its floodplain Measurement and management of large rivers The effect of climatic change on large rivers Perfect for postgraduate students and researchers in fluvial geomorphology hydrology sedimentary geology and river management Large Rivers Geomorphology and Management will also earn a place in the libraries of engineers and environmental consultants in the private and public sectors working on major rivers around the world

Fluvial-Tidal Sedimentology, 2015-11-26 Fluvial Tidal Sedimentology provides information on the Tidal Fluvial Transition the transition zone between river and tidal environments and includes contributions that address some of the most fundamental research questions including how the morphology of the tidal fluvial transition zone evolves over short days and long decadal time periods and for different tidal and fluvial regimes the structure of the river flow as it varies in its magnitude over tidal currents and how this changes at the mixing interface between fresh and saline water and at the turbidity maximum the role of suspended sediment in controlling bathymetric change and bar growth and the role of fine grained sediment muds and flocs whether it is possible to differentiate between fluvial and tidally influenced bedforms as preserved in bars and within the adjacent floodplain and what are the diagnostic sedimentary facies of tidal fluvial deposits and how are these different from pure fluvial and tidal deposits amongst other topics The book presents the latest research on the processes and deposits of the tidal fluvial transition documenting recent major field programs that have quantified the flow sediment transport and bed morphology in tidal fluvial zones It uses description of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition Presents the latest outcomes from recent large integrated field programs in estuaries around the world Gives detailed field descriptions outcrop borehole core contemporary sediments of tidal fluvial deposits Accesses new models and validation datasets for estuarine processes and deposits Presents descriptions of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition

[Analogues for Planetary Exploration](#) W. Brent Garry, Jacob E. Bleacher, 2011 Where on Earth is it like Mars How were the Apollo astronauts trained to be geologists on the Moon Are volcanoes on Earth just like the ones on other planets The exploration of our solar system begins in our own backyard Discoveries on other planetary bodies cannot always be easily explained Therefore geologic sites on this planet are used to better understand the extraterrestrial worlds we explore with humans robots and satellites Analogues

for Planetary Exploration is a compilation of historical accounts of astronaut geology training overviews of planetary geology research on Mars educational field trips to analog sites plus concepts for future human missions to the Moon This Special Paper provides a great overview of the science training and planning related to planetary exploration for students educators researchers and geology enthusiasts After all as we learn about the solar system we can better understand our own planet Earth

Martian Geomorphology Matthew R. Balme, 2011 The latest Mars missions are returning data of unprecedented fidelity in their representation of the martian surface New data include images with spatial resolution better than 30 cm per pixel stereo imaging derived terrain models with one meter postings high resolution imaging spectroscopy and RADAR data that reveal subsurface structure This book reveals how this information is being used to understand the evolution of martian landscapes and includes topics such as fluvial flooding permafrost and periglacial landforms debris flows deposition and erosion of sedimentary material and the origin of lineaments on Phobos the larger martian moon Contemporary remote sensing data of Mars on a par with those of Earth reveal landscapes strikingly similar to regions of our own planet so this book will be of interest to Earth scientists and planetary scientists alike An overview chapter summarising Mars climate geology and exploration is included for the benefit of those new to Mars

Encyclopedia of Environmental Change John A Matthews, 2013-12-13 Accessibly written by a team of international authors the Encyclopedia of Environmental Change provides a gateway to the complex facts concepts techniques methodology and philosophy of environmental change This three volume set illustrates and examines topics within this dynamic and rapidly changing interdisciplinary field The encyclopedia includes all of the following aspects of environmental change Diverse evidence of environmental change including climate change and changes on land and in the oceans Underlying natural and anthropogenic causes and mechanisms Wide ranging local regional and global impacts from the polar regions to the tropics Responses of geo ecosystems and human environmental systems in the face of past present and future environmental change Approaches methodologies and techniques used for reconstructing dating monitoring modelling projecting and predicting change Social economic and political dimensions of environmental issues environmental conservation and management and environmental policy Over 4 000 entries explore the following key themes and more Conservation Demographic change Environmental management Environmental policy Environmental security Food security Glaciation Green Revolution Human impact on environment Industrialization Landuse change Military impacts on environment Mining and mining impacts Nuclear energy Pollution Renewable resources Solar energy Sustainability Tourism Trade Water resources Water security Wildlife conservation The comprehensive coverage of terminology includes layers of entries ranging from one line definitions to short essays making this an invaluable companion for any student of physical geography environmental geography or environmental sciences

Fundamentals of Geomorphology Richard Huggett, Emma Shuttleworth, 2022-12-22 This revised and updated edition continues to provide a comprehensive introduction to the subject exploring the world s

landforms from a broad systems perspective It covers the basics of Earth surface forms and processes while reflecting on the latest developments in the field Fundamentals of Geomorphology begins with a consideration of the nature of geomorphology including its relation to society process and form history and geomorphic systems and moves on to discuss Structure structural landforms associated with plate tectonics and those associated with volcanoes and folds faults and joints Process and form landforms resulting from or influenced by the exogenic agencies of weathering running water flowing ice and meltwater ground ice and frost the wind and the sea landforms developed on limestone extraterrestrial landforms and landscape evolution a discussion of ancient landforms Fundamentals of Geomorphology provides a stimulating and innovative perspective on the key topics and debates within the field of geomorphology Written in an accessible and lively manner it includes guides to further reading chapter summaries and an extensive glossary of key terms The book is also illustrated throughout with over 200 informative diagrams and attractive photographs all in colour It is supported by online resources for students and instructors

Alberta's Lower Athabasca Basin Brian M. Ronaghan, 2017-05-24 Over the past two decades the oil sands region of northeastern Alberta has been the site of unprecedented levels of development Alberta's Lower Athabasca Basin tells a fascinating story of how a catastrophic ice age flood left behind a unique landscape in the Lower Athabasca Basin one that made deposits of bitumen available for surface mining Less well known is the discovery that this flood also produced an environment that supported perhaps the most intensive use of boreal forest resources by prehistoric Native people yet recognized in Canada Studies undertaken to meet the conservation requirements of the Alberta Historical Resources Act have yielded a rich and varied record of prehistoric habitation and activity in the oil sands area Evidence from between 9 500 and 5 000 years ago the result of several major excavations has confirmed extensive human use of the region's resources while important contextual information provided by key geological and palaeoenvironmental studies has deepened our understanding of how the region's early inhabitants interacted with the landscape Touching on various elements of this rich environmental and archaeological record the contributors to this volume use the evidence gained through research and compliance studies to offer new insights into human and natural history They also examine the challenges of managing this irreplaceable heritage resource in the face of ongoing development Contributors Alwynne Beaudoin Angela Younie Brian O K Reeves Duane Froese Elizabeth Roberston Eugene Gryba Gloria Fedirchuk Grant Clarke John W Ives Janet Blakey Jennifer Tischer Jim Burns Laura Roskowski Luc Bouchet Murray Lobb Nancy Saxberg Raymond LeBlanc Robert R Young Robin Woywitka Thomas V Lowell and Timothy Fisher

Ice Age Floodscapes of the Pacific Northwest Bruce Norman Bjornstad, 2021-02-02 This heavily illustrated book contains descriptions and geologic interpretations of photographs mostly aerial illustrating the power and magnitude of repeated Ice Age flooding in the Pacific Northwest as recently as 14 000 years ago The scale of Ice Age floods was so huge that today it is often difficult to see and appreciate the power and magnitude of such megafloods from ground level However from the air landforms created by the

floods often come into clear focus Aerial images obtained via unmanned aerial vehicle drone as well as fixed wing airplane add a new perspective on evidence gathered by dozens of scientists since 1923 [Encyclopedia of Geology](#) ,2020-12-16 Encyclopedia of Geology Second Edition presents in six volumes state of the art reviews on the various aspects of geologic research all of which have moved on considerably since the writing of the first edition New areas of discussion include extinctions origins of life plate tectonics and its influence on faunal provinces new types of mineral and hydrocarbon deposits new methods of dating rocks and geological processes Users will find this to be a fundamental resource for teachers and students of geology as well as researchers and non geology professionals seeking up to date reviews of geologic research Provides a comprehensive and accessible one stop shop for information on the subject of geology explaining methodologies and technical jargon used in the field Highlights connections between geology and other physical and biological sciences tackling research problems that span multiple fields Fills a critical gap of information in a field that has seen significant progress in past years Presents an ideal reference for a wide range of scientists in earth and environmental areas of study

Dynamic Mars Richard Soare,Susan Conway,Stephen M. Clifford,2018-08-07 *Dynamic Mars* Recent and Current Landscape Evolution of the Red Planet presents the latest observations interpretations and explanations of geological change at the surface or near surface of this terrestrial body These changes raise questions about a decades old paradigm formed largely in the aftermath of very coarse Mariner mission imagery in the 1960s suggesting that much of the interesting geological activity on Mars occurred deep in its past eons ago The book includes discussions of 1 Mars ever changing atmosphere and the impact of this on the planet s surface and near surface 2 the possible involvement of water in relatively new if not contemporary gully like flows and slope streaks i e recurring slope lineae and 3 the identification of a broad suite of agents and processes i e glacial periglacial aeolian meteorological volcanic and meteoric that are actively revising surface and near surface landscapes landforms and features on a local regional and hemispheric scale Highly illustrated and punctuated by data from the most recent Mars missions *Dynamic Mars* is a valuable resource for all levels of research in the geological history of Mars as well as of the three other terrestrial planets Utilizes observational and model based data as well as geological context to frame the understanding of the dynamic surface and near surface of Mars Presents a broad spectrum of highly regarded experts and themes to discuss and evaluate the geological history of late and current Mars Includes extensive and detailed imagery to clearly illustrate these themes discussions and evaluations

Untangling the Quaternary Period Richard B. Waitt,Glenn D. Thackray,Alan R. Gillespie,2021-04-20 This volume brings together nineteen papers of interdisciplinary Quaternary science honoring Stephen Porter Special Paper 548 features papers from six continents on wide ranging topics including glaciation paleoecology landscape evolution megafloods and loess The topical and geographical range of the papers as well as their interdisciplinary nature honor Porter s distinct approach to Quaternary science and leadership that influence the field to this day
