Johnson, 2017-11-20 Today's high schools are increasingly based around the use of digital technologies. Students and teachers are encouraged to Bring Your Own Device teaching takes place through learning management systems and educators are rushing to implement innovations such as flipped classrooms, personalized learning, analytics, and maker technologies. Yet despite these developments, the core processes of school appear to have altered little over the past 50 years. As the twenty-first century progresses, concerns are growing that the basic model of school is broken and no longer fit for purpose. This book moves beyond the hype and examines the everyday realities of digital technology use in today's high schools. Based on a major ethnographic study of three contrasting Australian schools, the authors lay bare the reasons underlying the inconsistent impact of digital technologies on day-to-day schooling. The book examines leadership and management of technology in schools, the changing nature of teachers' work in the digital age, as well as student misuses of technologies in and out of classrooms. In-depth case studies are presented of the adoption of personalized learning apps, social media, and 3D printers. These investigations all lead to a detailed understanding of why schools make use of digital technologies in the ways that they do. **Everyday Schooling in the Digital Age** High School High Tech offers a revealing analysis of the realities of contemporary schools and schooling, drawing on arguments and debates from various academic literatures such as policy studies, sociology of education, social studies of technology, media and communication studies. Over

the course of ten wide ranging chapters a range of suggestions are developed as to how the full potential of digital technology might be realized within schools Written in a detailed but accessible manner this book offers an ambitious critique that is essential reading for anyone interested in the fast changing nature of contemporary education

author of *How Not to Be Wrong* In today's data-driven world, maths is a weapon wielded by banks, insurance companies, tech firms, and government agencies. These organizations use sophisticated algorithms to calculate odds, make predictions, uncover patterns, manage risk, and optimize actions. And they treat you as another number to crunch along the way. Robin Hood Maths explains the mathematical methods these companies and agencies use to manipulate and profit off of you. It's easy to assume these algorithms are too complex to even understand, let alone use for yourself. But maths professor Noah Giansiracusa makes the compelling case that anyone can use these same methods without any special training. He offers simple hacks and streamlined formulas for beating the number crunchers at their own game. **MAKE BETTER INVESTMENTS. TAKE CONTROL OF YOUR SOCIAL MEDIA. HANDLE RISK RATIONALLY.** With Professor Giansiracusa as your guide, you'll learn how to reclaim agency over the decisions you make every day. In a society designed to take from the poor and give to the rich, maths has the potential to be a powerful democratizing force. Robin Hood Maths gives you the tools you need to think for yourself, act in your own best interest, and thrive.
