While adults' perceptions have been shown to affect their judgments of children's processes, their children's perceptions, in turn, affect their own behavior and their own self-regulatory strategies. As adults' beliefs regarding children's cognitive development change, they may also change their own cognitive strategies (e.g., Gershon, 1990; Gershon & Gershon, 1995). Thus, the relationship between adults' and children's perceptions of children's cognitive development is reciprocal and bidirectional.
