Organizing in the Digital Age draws on a process oriented perspective to understand the pervasiveness of digitalization in organizations and contemporary society. Ongoing and multiple crises, whether it be the pandemic, the economy or climate change, have magnified the importance of digital technologies in processes of organizing and accelerated the role of digital transformation in work life. The central themes underpinning the chapters in this book concern the becoming of digital work, the conceptualization of agency in digital work and the role of temporality in contemporary organizing. The increasing entanglement of digital technologies and work accelerated through the Covid 19 pandemic have fuelled interest in the need for understanding digital work happening at scale while also examining and exposing inequalities. The concern with the role of agency in digital work reaches new heights when we consider the rapid and pervasive development and implementation of Artificial Intelligence (AI) and algorithmic control and raises concerns about the ethical and moral dimension of agency. Methodologically, the book explores the use of digital trace data as a resource in the study of organizing processes. While digital traces offer unprecedented access to temporally evolving activity, they are nevertheless limited in their ability to represent phenomena. In essence, processual shadows visible from digital data traces may be difficult to interpret without in-person observational data such as ethnography. Theoretical approaches around performativity are discussed in terms of the impact or not of innovative digital technologies such as blockchain in organizations while routine dynamics and pragmatism are drawn on in providing a processual understanding of the why and how of IT computer workarounds within organizational work practices.

gender difference not gender equality is a secret source for success Some smart businesses are starting to wake up to this fact This book explores why and how Properly valuing brain gender diversity in the workplace is one of the biggest and largely untapped sources of competitive advantage for modern businesses Recent advances in neuroscience provide the key to unlocking it Modern research shows that there are gender based differences in the brain it s just not as simple as a binary between a male brain and female brain In fact our brains are like a mosaic where many of the tiles are available in thousands of shades on a spectrum between pink and blue The problem is that our workplaces tend to be governed by structures processes and cultures that are practically pure blue All the brains in the business that are elsewhere on the spectrum cannot thrive as they might so sources of productivity creativity and agility go untapped Anyone who manages people needs to understand how the brain works and the impact it has on how people work together as teams Anyone who wants to unlock the talent and productivity of all of their people needs to understand how recent findings around male and female type brains should shape the way they manage Leading applied neuroscientists and international corporate coaches Kate Lanz and Paul
