Chromic Phenomena Peter Bamfield, Michael Hutchings, 2018-08-22 Chromic or colour-related phenomena are produced in response to a chemical or physical stimulus. This new edition will update the information on all those areas where chemicals or materials interact with light to produce colour, a colour change, or luminescence, especially in the imaging, analysis, lighting, and display areas. The book has been restructured to show greater emphasis on applications where coloured compounds are used to transfer energy or manipulate light in some way, therefore reducing the details on classical dyes and pigments. In the past eight years since the previous edition, there has been a remarkable increase in the number of papers and reviews being produced, reflecting the growth of interest in this area. This ongoing research interest is matched by a large number of new technological applications gaining commercial value, covering e.g. biomedical areas, energy, data storage, physical colour, bio-inspired materials, and photonics. This book appeals to industrial chemists, professionals, postgraduates, and as high-level recommended reading for colour technology courses. **Near Infrared Detectors Based on Silicon**

Supersaturated with Transition Metals Daniel Montero Álvarez, 2021-01-08 This thesis makes a significant contribution to the development of cheaper Si-based Infrared detectors operating at room temperature. In particular, the work is focused on the integration of the Ti-supersaturated Si material into a CMOS Image Sensor, the technology of choice for imaging nowadays due to its low cost and high resolution. First, the material is fabricated using ion implantation of Ti atoms at high concentrations. Afterwards, the crystallinity is recovered by means of a pulsed laser process. The material is used to fabricate planar photodiodes, which are later characterized using current-voltage and quantum efficiency measurements. The prototypes showed improved sub-bandgap responsivity up to 0.45 eV at room temperature. The work is further supported by a collaboration with STMicroelectronics, where the supersaturated material was integrated into CMOS-based sensors at

industry level The results show that Ti supersaturated Si is compatible in terms of contamination process integration and uniformity The devices showed similar performance to non implanted devices in the visible region This fact leaves the door open for further integration of supersaturated materials into CMOS Image Sensors

Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents.
