web sep 1 2020 of the two approaches we found that lstm proved to be the most capable supervised learning model during more capricious wind conditions and made competent windspeed predictions with an average root mean square error of 0.61 m/s averaged across two drones when trained on at least 20 min of flight data

physics informed machine learning for wind speed prediction - Sep 28 2022

web jan 7 2023 here we take an alternative data driven approach based on supervised learning we analyze massive datasets of wind measured from anemometers located at 10 m height in 32 locations in central and north west italy we train supervised learning algorithms using the past history of wind to predict its value at future horizons
