Mathematics is a social product, a net of norms as Wittgenstein writes. In contrast to other institutions, traffic rules, legal systems or table manners, which are often internally contradictory and are hardly ever unrestrictedly accepted, mathematics is distinguished by coherence and consensus. Although mathematics is presumably the discipline which is the most differentiated internally, the corpus of mathematical knowledge constitutes a coherent whole. The consistency of mathematics cannot be proved; yet so far, no contradictions were found that would question the uniformity of mathematics. Heintz, 2000, p. 11. The coherence of mathematical knowledge is closely related to the kind of professional communication that research mathematicians hold about mathematical knowledge. In an extensive study, Bettina Heintz, Heintz, 2000, proposed that the historical development of formal mathematical proof was in fact a means of establishing a communicable code of conduct which helped mathematicians make themselves understood in relation to the truth of mathematical statements in a coordinated and unequivocal way. *Subject Guide to Books in Print*, 1993 *The School Counselor*, 1982 **Research Bulletin** Educational Testing Service, 1955 **The Publishers Weekly**, 2006 **The New Advisor Guidebook** Pat Folsom, Franklin Yoder, Jennifer E. Joslin, 2015-09-21 This is an exciting time to be an academic advisor, a time in which global recognition of the importance of advising is growing. Research affirms the critical role advising plays in student success and institutions of higher education increasingly view advising as integral to their missions and essential for improving the quality of students' educational experiences. It is essential that advisors provide knowledgeable, realistic counsel to the students in their charge. The *New Advisor Guidebook* helps advisors meet this challenge. The first and final chapters of the book identify the knowledge and skills advisors must master. These chapters present frameworks for setting and benchmarking self-development goals and for creating self-development plans. Each of the chapters in between focuses on foundational content: the basic terms, concepts, information and skills advisors must learn in their first year and upon which they will build over the lengths of their careers. These chapters include strategies, questions, guidelines, examples and case studies that give advisors the tools to apply this content in their work with students from demonstrations of how student development theories might play out in advising sessions to questions advisors can ask to become aware of their biases and avoid making assumptions about students to a checklist for improving listening, interviewing and referral skills. The book covers various ways in which advising is delivered: one-to-one, in groups and online. The *New Advisor Guidebook* serves as an introduction to what advisors must know to do their jobs effectively. It pairs with *Academic Advising Approaches: Strategies That Teach Students to Make*
