Unit 1: Problems of Digestion, Nutrition and Elimination

- Large intestines absorb water
- Brown color of stool is due to bile
- Common bile duct problems result in poop having a pale color

Assessment of the GI system GI changes associated with aging

Weakening of all muscles

- Slowing of peristalsis means more water is absorbed in large intestines which lead to harder stool (constipation is a problem with old age)
- Decreased ability to store glycogen (stored energy)
- Decreased ability to turn glycogen into usable energy
- Acid production in the stomach decreases
- Lining of the stomach is protected by acid, with acid decreased it puts the lining at risk for peptic ulcers
- Medication absorption decreases
- Decreased production of intrinsic factor (needed to assist with absorption of B12)
- Not enough B12 leads to pernicious anemia, cardiac and pyloric sphincter become more sensitive and less functional, increased GERD, decreased insulin production, decreased response to hyperglycemia and hypoglycemia
