Membrane Nanodomains John R Silvius:

Membrane Nanodomains John R. Silvius, 2013-02-01 Many membranes in eukaryotic cells are inhomogeneous structures in which various membrane components are nonrandomly distributed forming diverse types of domains. Some membrane domains have long been well known because they are sufficiently large, long lived, and morphologically well defined to be characterized using classical microscopic and biochemical approaches. However, new technologies have revealed the presence in membranes of smaller, often highly dynamic nanodomains that also play key roles in membrane function. Our current understanding of the diversity, the properties, and the functions of nanodomains is still very limited and in some cases controversial. Nonetheless, it is clear that many important aspects of membrane biology arise from features of membrane organization that play out on spatial and temporal scales that are only now becoming experimentally accessible in living systems. In this book, we will discuss properties and interactions of membrane molecules that lead to nanodomain formation, new and emerging technologies by which nanodomains can be studied, and experimental examples that illustrate both highlights and current limitations of our present knowledge of the properties of membrane nanodomains in various cell types.

The Molecular Biology of Neurofibromatosis Type 1 Meena Upadhyaya, 2014-02-01 Neurofibromatosis type 1 (NF1) is a common autosomal dominantly inherited tumour predisposition syndrome affecting 1 in 3,000–4,000 individuals worldwide. This inherited disorder results from the mutational inactivation of the NF1 gene on human chromosome 17. The NF1 gene contains 61 exons that give rise to 12 kb mRNA encoding neurofibromin. The 327 kDa 2,818 amino acid neurofibromin protein is expressed in most tissues and has a number of alternative isoforms. Neurofibromin is a tumour suppressor protein and down-regulates cellular Ras. Increased active Ras GTP levels also stimulate the important PI3K/AKT/mTOR signalling pathway that protects cells from apoptosis. The major clinical features of NF1 include multiple café au lait macules, skinfold freckles, iris

Lisch nodules and neurofibromas The diagnostic criteria for clinical diagnosis have been well established However there are a small number of cases in which the diagnosis is not certain The germline mutation rate for the NF1 gene is 10 fold higher than that observed for most other inherited diseases Using a combination of different techniques almost 95% of germline mutations can be detected To date only two firm genotype phenotype correlations have been reported NF1 phenotype exhibits large variations within a family evidence for modifying loci regulating the expression of an NF1 gene is beginning to emerge We also are gaining knowledge on the molecular mechanisms associated with the development of different types of tumours It is encouraging that the results of recent laboratory and clinical research are finally being translated into clinical trials With the availability of high throughput technologies sophisticated animal models and multi centre clinical trials the future for NF1 sufferers is looking optimistic This book aims to provide an overview of the genetic and clinical aspects of NF1 and its role in both NF1 associated and sporadic tumour development It emphasizes the recent developments in this field and some of the promising on going clinical trials

Characterization of Biological Membranes Mu-Ping Nieh, Frederick A. Heberle, John Katsaras, 2019-07-22 The study of membranes has become of high importance in the fields of biology pharmaceutical chemistry and medicine since much of what happens in a cell or in a virus involves biological membranes The current book is an excellent introduction to the area which explains how modern analytical methods can be applied to study biological membranes and membrane proteins and the bioprocesses they are involved to

Liposomes, Lipid Bilayers and Model Membranes Georg Pabst, Norbert Kucerka, Mu-Ping Nieh, John Katsaras, 2014-03-04 As a result of their unique physical properties biological membrane mimetics such as liposomes are used in a broad range of scientific and technological applications Liposomes Lipid Bilayers and Model Membranes From Basic Research to Application describes state of the art research and future directions in the field of membranes which has evolved

Smart Membranes and Sensors Annarosa Gugliuzza, 2014-09-19 This book addresses the reader to use synergistically the concepts of membranes and sensors materials It contains insightful contributions from leading scientists working in both the fields The focus is on the fabrication of smart membranes from sensor materials and related impact on many technologically sophisticated areas such as telemedicine microfluidics drug delivery targeting bio separation labs on a chip textiles power storage and release environment monitoring agro food safety cosmetics architecture automotive and so on This book covers various topics including the choice of materials and techniques for assembling responsive membranes with ability to transport mass energy and signals on demand the reader will find through the book an extensive description of the best techniques used to monitor molecular scale events which are regarded as responsible for the smartness of multifunctional objects and for the conversion of chemical signals into optical electrical thermal and mechanical responses The reader is encouraged to use this cross disciplinary discussion for his own research Chemical biological and physical concepts expressed through the book contribute to form a common language which will allow the reader to discover causes for reflection and innovation measuring

how smart objects with desired properties can be tailored from existing materials and used flexibly for different developed applications Specifically This book deals with materials smartness and suitable techniques to assemble and characterize them in sensor like membranes This book shows how ultra smart functional devices can be accomplished by using traditional raw materials This book describes particular key events which control sense to react and adapt mechanisms The potential of sensor like membranes in some key strategic fields is examined with particular emphasis on biomedicine food and textiles markets The benefits arising from the use of smart membranes are analysed in terms of life quality safety and innovation
