Model-Reference Robust Tuning of PID Controllers Victor M. Alfaro, Ramon Vilanova, 2016-04-16 This book presents a unified methodology for the design of PID controllers that encompasses the wide range of different dynamics to be found in industrial processes This is extended to provide a coherent way of dealing with the tuning of PID controllers The particular method at the core of the book is the so called model reference robust tuning MoReRT developed by the authors MoReRT constitutes a novel and powerful way of thinking of a robust design and taking into account the usual design trade offs encountered in any control design problem The book starts by presenting the different two degree of freedom PID control algorithm variations and their conversion relations as well as the indexes used for performance robustness and fragility evaluation the bases of the proposed model Secondly the MoReRT design methodology and normalized controlled process models and controllers used in the design are described in order to facilitate the formulation of the different design problems and subsequent derivation of tuning rules In later chapters the application of MoReRT to over damped inverse response integrating and unstable processes is described The book ends by presenting three possible extensions of the MoReRT methodology thereby opening the door to new research developments In this way the book serves as a reference and source book for academic researchers who may also consider it as a stimulus for new ideas as well as for industrial practitioners and manufacturers of control systems who will find appropriate advanced solutions to many application problems

Case Studies in Control Stanko Strmčnik, Đani Juričić, 2013-06-12 *Case Studies in Control* presents a framework to facilitate the use of advanced control concepts in real systems based on two decades of research and over 150 successful applications for industrial end users from various backgrounds In successive parts the text approaches the problem of putting the theory to work from both ends theoretical and practical The first part begins with a stress on solid control theory and the shaping of that theory to solve particular instances of practical problems It emphasizes the need to establish by experiment whether a model derived solution will perform properly in reality The second part focuses on real

industrial applications based on the needs and requirements of end users Here the engineering approach is dominant but with theoretical input of varying degree depending on the particular process involved Following the illustrations of the progress that can be made from either extreme of the well known theory practice divide the text proceeds to a third part related to the development of tools that enable simpler use of advanced methods a need only partially met by available commercial products Each case study represents a self contained unit that shows an experimental application of a particular method a practical solution to an industrial problem or a toolkit that makes control design and implementation easier or more efficient Among the applications presented are wastewater treatment manufacturing of electrical motors temperature control of blow moulding burn protective garments quality assessment and rapid prototyping Written by contributors with a considerable record of industrially applied research Case Studies in Control will encourage interaction between industrial practitioners and academic researchers and be of benefit to both helping to make theory realistic and practical implementation more thorough and efficacious Advances in Industrial Control aims to report and encourage the transfer of technology in control engineering The rapid development of control technology has an impact on all areas of the control discipline The series offers an opportunity for researchers to present an extended exposition of new work in all aspects of industrial control
