British Books, 1963 Understanding Light Microscopy Jeremy Sanderson, 2019-03-28 Introduces readers to the enlightening world of the modern light microscope There have been rapid advances in science and technology over the last decade and the light microscope together with the information that it gives about the image has changed too Yet the fundamental principles of setting up and using a microscope rests upon unchanging physical principles that have been understood for years This informative practical full colour guide fills the gap between specialised edited texts on detailed

research topics and introductory books which concentrate on an optical approach to the light microscope. It also provides comprehensive coverage of confocal microscopy which has revolutionised light microscopy over the last few decades. Written to help the reader understand set up and use the often very expensive and complex modern research light microscope properly. Understanding Light Microscopy keeps mathematical formulae to a minimum containing and explaining them within boxes in the text. Chapters provide in depth coverage of basic microscope optics and design ergonomics illumination diffraction and image formation reflected light polarised light and fluorescence microscopy deconvolution TIRF microscopy FRAP super resolution techniques biological and materials specimen preparation and more. Gives a didactic introduction to the light microscope. Encourages readers to use advanced fluorescence and confocal microscopes within a research institute or core microscopy facility. Features full colour illustrations and workable practical protocols. Understanding Light Microscopy is intended for any scientist who wishes to understand and use a modern light microscope. It is also ideal as supporting material for a formal taught course or for individual students to learn the key aspects of light microscopy through their own study.

Select Topics of Econophysics Amit Sinha, 2024-11-04 Economics requires understanding and analyzing forces that bring buyers and sellers to a market place who then negotiate exchanges of goods and services based on a mutually agreeable price. Economists have their own method of modeling whereby models are first conceived of some notion of economic and financial thinking before being empirically tested and anomalies are then recognized if the observed data is inconsistent with the hypothetical underpinning. This is in inherent contradiction with the modeling approaches of physicists who develop their theories principle and laws after observing empirical data. The awareness that physics can enlighten the understanding of human behavior and thus economics and the interest of physicists in applying their training and models to understanding the complexities of finance and economics led to the creation of a new field of study appropriately termed as Econophysics. Selected Topics on Econophysics is a collection of essays on topics that enhance and enrich our understanding of economic modeling when the same rigor of modelling used by physicists is brought to developing financial and economic theories. These articles include discussions on modeling bitcoins stock index modeling using geometric Brownian motion agent based modeling wealth distribution modeling as well as modeling related to fractal regression and chaotic processes. This interdisciplinary book will interest researchers graduate students and professionals in the fields of economics finance as well as physics.

Pumpkopfdesign für den Advanced LIGO Laser* (*LIGO = Laser Interferometer Gravitational Wave Observatory) Oliver Puncken, 2011-12-13 Hohe Laserleistungen im Dauerstrichbetrieb bei gleichzeitig guter Strahlqualität kleinen Linienbreiten und geringem Leistungs- und Frequenzrauschen sind die Anforderungen an Lasersysteme die in Gravitationswellendetektoren eingesetzt werden sollen die nach dem Prinzip eines Michelson Interferometers arbeiten. In der vorliegenden Arbeit werden Untersuchungen vorgestellt mit denen das Laserkonzept für den Gravitationswellendetektor LIGO Laser Interferometer Gravitational Wave Observatory

weiter entwickelt wurde In seiner aktuellen Ausbaustufe soll das LIGO Lasersystem um einen injektionsgekoppelten Nd YAG Hochleistungsoszillator ergänzt werden mit dessen Hilfe die Laserleistung von 35 W auf 165 W skaliert werden soll Die Komplexität dieses Oszillators erlaubt nur bedingt eine genaue Untersuchung seiner Limitierungen in Ausgangsleistung und Strahlprofil Daher wurde das System für die in dieser Arbeit vorgestellten Experimente stark vereinfacht lässt aber trotzdem Rückschlüsse auf das LIGO Lasersystem zu Es wird ein asymmetrischer Stehwellenresonator verwendet der aus zwei sich gegenüber stehenden longitudinal gepumpten Nd YAG Kristallen besteht Zwischen den Kristallen befindet sich eine Doppelbrechungskompensation die aus einer 4f Abbildung und ein 90° Quarzrotator besteht Der Einfluss von Änderungen der Resonatorgeometrie der Pumplichtverteilung innerhalb des Lasermediums und des Lasermediums selbst auf das Laserverhalten werden separat betrachtet Das Konzept dynamisch stabiler Resonatoren erlaubt die Selektion der transversalen Grundmode über die Wahl der optimalen Resonatorarmängen Die Wahl wird von thermo optischen Effekten beeinflusst wie sie in dieser Arbeit mit Hilfe unterschiedlicher Methoden charakterisiert werden Durch die Pumplichtverteilung im Laserkristall kann das Anschwingen unterschiedlicher Moden kontrolliert und die Effizienz optimiert werden Bei einer sehr guten Strahlqualität des Pumplichtes können sich jedoch durch die Konzentration des Pumplichtes in der Nähe der Kristallachse thermo optische Effekte verstärken Es wird untersucht wie Effizienz Strahlqualität und Ausgangsleistung von der Pumplichtverteilung im Laserkristall abhängen Verschiedene Möglichkeiten Nd YAG Kristalle hinsichtlich ihrer Dotierung zu charakterisieren werden vorgestellt Mit dem Ziel einen Kristalltyp vorzuschlagen der möglichst effizient eingesetzt werden kann werden unterschiedliche Kristalldesigns untersucht Ausgangspunkt sind mit 0,1 at % dotierte Nd YAG Kristalle die für einen Pumplicht Doppeldurchgang ausgelegt sind Vergleichend werden Kristalle evaluiert die aus Segmenten unterschiedlicher Dotierung bestehen und damit niedrigere longitudinale Temperaturgradienten aufweisen Hier dotierte Kristalle die abseits des Nd YAG Absorptionsmaximums gepumpt werden bieten Vorteile hinsichtlich einer reproduzierbareren Kristallqualität Mit der Dotierung ändern sich jedoch die Pumplichtanteile die in Wärme Fluoreszenz und stimulierte Emission übergehen Dieser Zusammenhang wird in Rahmen der Arbeit analysiert Die Depolarisation linear polarisierter Laserstrahlung kann in gepumpten Nd YAG Kristallen die in 110 oder 100° Richtung geschnittenen sind reduziert werden Ein völliger Verzicht auf eine Doppelbrechungskompensation führt jedoch zu schlechteren Ergebnissen als die Verwendung von in der üblichen 111° Richtung geschnittenen Kristallen mit Doppelbrechungskompensation Die in dieser Arbeit durchgeführten Untersuchungen haben Einfluss auf die Entwicklung und das Verständnis des LIGO Oszillators genommen so dass in die amerikanischen Gravitationswellendetektoren ein ausgereiftes Lasersystem integriert werden konnte
