UNIT	LOCATION
Main	Indoor temperature sensor
Remote	Outdoor temperature sensor

REMOTE SENSOR

The sensor collects temperature readings every 40 seconds and sends them to the main unit. The main unit can collect data from up to 9 sensors.

To start the sensor:

1. Remove open the battery door.
2. Insert the batteries, matching the polarity **+** / **-**.
3. Press after each battery change.
4. Select a channel. Make sure you use a different channel for each sensor.

4. Close the battery cover door.
5. Remove the sensor to the desired location using the self-adhesive tape strip.

For best results:

- Place the sensor out of direct sunlight and moisture.
- Do not place the sensor more than 30 meters (100 ft) from the main unit.
- Position the sensor so that it faces the main (direct) unit, minimizing obstructions such as doors, walls, and furniture.
- Place the sensor at a location with a clear view to the main unit.
- Position the sensor close to the main unit during cold winter months to better drawing temperatures, thus affect battery performance and signal transmission.

The temperature range may vary depending on many factors. Please refer to the manual for experiment with various locations to get the best results.

Standard/Active batteries contain significant amounts of water. Because of this they will freeze in low temperatures of approximately -10°C (50°F). Rechargeable lithium batteries freeze at much lower (deeper) for temperatures with an estimated freezing range of below -20°C (4°F).

Winter ranges can be impacted by a variety of factors such as extremely cold temperatures. Extreme cold may temporarily affect the ability of the sensor to receive and the main station. If the unit's performance falls due to low temperature, the unit will require proper functioning as the temperature rises to within the normal temperature range (i.e., no permanent damage will occur to the unit due to low temperatures).

RECEPTION STATUS

The reception status for outdoor temperature sensor shows the status.

ON/OFF RECEPTION

The product is designed to synchronize its date and time automatically since it is within range of the wireless signal from the atomic clock at Fort Collins, Colorado. The clock collects the radio signals whenever it is within range and gives it a signal.

NOTE: Initial reception takes 2-10 minutes for first set up or when **RESET** is pressed. Once complete, the reception can be stopped. If the signal is weak, it can take up to 24 hours to get a red signal.
