

member of a particular life history subgroup. The goal of the model is the prediction and understanding of person–job relationships.

Schoenfeldt (1974) examined the validity of the model with a large sample of students ($N = 1934$) working toward college degrees. Subgroups, formed on the basis of previous behavioral data collected during the freshman year, differed with respect to criterion (major, grade-point average, and so forth) measurements taken 4 years later. More important, the subgroups differed with respect to the curricular paths taken during college. The results indicated that it was possible to differentiate people in meaningful ways, to identify “job families,” and to match people with jobs.

Two industrial studies have been reported using the assessment-classification model. In the first, Morrison (1977) tested the model’s efficacy in making placement decisions in an industrial setting with hourly employees. Eight developmental-interest dimensions describing life choices, values, and interests of 438 blue-collar workers were formulated. Job analysis identified two clusters of positions that were homogeneous within, and differentiated between, each other on relevant job attributes. One cluster consisted of process operator positions and had 102 incumbents with more than 6 months’ service. The other cluster was composed of heavy equipment operator positions that had 148 incumbents. A discriminant function was calculated on a validation group of incumbents in an effort to develop a linear combination of the life history factors that maximally differentiated the two job families. Cross-validation demonstrated that three psychologically meaningful dimensions discriminated among the groups at both statistical and practical levels. The process operators were more likely to be raised in an urban environment, to have a more favorable self-image, and to prefer standardized work schedules.

The second study was by Brush and Owens (1979) and covered a total of 1,987 hourly employees of a major oil company. Each employee completed an extensive biographical inventory. Hierarchical clustering of the resulting biographical profiles produced 18 subgroups of employees, such that within any one subgroup, background experiences and interests were similar, and among subgroups, they were different. A similar methodology was applied to job analysis data in creating a structure of 19 job families for 939 office and clerical jobs. Significant relationships were found between biodata subgroups and criteria, such as sex, educational level, termination rate, job classification and, most important, performance rating.

The value of the assessment-classification model is in the potential to place applicants in jobs for which the probability of success and satisfaction is maximal. Other purely statistical approaches exist, but do not incorporate dimensions psychologists would suggest are important to the match of individuals to jobs.

In a more recent study, Granrose and Portwood (1987) looked at placement in the context of career management. Programs that attempt to match individual career plans with overall trends and needs within the organization are simply

The Psychological Effects of Immigrating Robert Tyminski, 2022-09-09

Exploring immigration from psychological, historical, clinical, and mythical perspectives, this book considers the varied and complex answers to questions of why people immigrate to entirely new places and leave behind their familiar surroundings and culture. Using research reviews, extensive case material, and literary examples such as Virgil's *The Aeneid*, Robert Tyminski's work will deepen readers' understanding of what is both unique and universal about migratory experiences. He addresses the negative consequences of xenophobia, the acculturation experiences of children compared to adults, the trauma and psychological issues that arise when seeking refuge or relocating to a new country, and the more recent implications of COVID-19 upon border crossings. Tyminski also re-evaluates the term identity as a psychological shorthand, suggesting that it can flatten our understanding of human complexity and erase migrant and refugee life stories and differences. As one of few books to investigate immigration from a Jungian-oriented perspective, Robert Tyminski's work offers a new and broad perspective on the mental health issues related to immigration. This book will prove essential for clinicians working with refugees and migrants, when in training and in practice, as well as students and practitioners of psychoanalysis seeking to deepen their understanding of migratory experiences.

Reconsidering Flannery O'Connor Alison Arant, Jordan Cofer, 2020-11-24

Contributions by Lindsay Alexander, Alison Arant, Alicia Matheny Beeson, Eric Bennett, Gina Caison, Jordan Cofer, Doug Davis, Doreen Fowler, Marshall Bruce Gentry, Bruce Henderson, Monica C. Miller, William Murray, Carol Shloss, Alison Staudinger, and Rachel Watson. The National Endowment for the Humanities has funded two Summer Institutes titled *Reconsidering Flannery O'Connor*, which invited scholars to rethink approaches to Flannery O'Connor's work. Drawing largely on research that started as part of the 2014 NEH Institute, this collection shares its title and its mission. Featuring fourteen new essays, *Reconsidering Flannery O'Connor* disrupts a few commonplace assumptions of O'Connor studies while also circling back to some old questions that are due for new attention. The volume opens with *New Methodologies*, which features theoretical approaches not typically associated with O'Connor's fiction in order to gain new insights into her work. The second section, *New Contexts*, stretches expectations on literary genre, on popular archetypes in her stories, and on how we should interpret her work. The third section, lovingly called *Strange Bedfellows*, puts O'Connor in dialogue with overlooked or neglected conversation partners, while the final section, *O'Connor's Legacy*, reconsiders her personal views on creative writing and her wishes regarding the handling of her estate upon death.

With these final essays the collection comes full circle attesting to the hazards that come from overly relying on O Connor's interpretation of her own work but also from ignoring her views and desires Through these reconsiderations some of which draw on previously unpublished archival material the collection attests to and promotes the vitality of scholarship on Flannery O Connor *The American Look* Rebecca Arnold, 2009 Drawing on a wonderful array of sources from fashion magazines to department store records this book is the rich and absorbing narrative and analysis of how New York sportswear evolved to become the definitive American style and how a modern fashion aesthetic was born **Psychology** Diane E.
