Architectures of Global AI Governance Matthijs M. Maas, 2025-09-30 The impacts of artificial intelligence AI are often framed as an uncontrollable wave of technological change But AI's trajectory is not preordained its governance is a human choice one that hinges on global institutions that are effective coherent and resilient to AI's own disruptions As AI systems grow more powerful states and international institutions today face mounting pressure to address their impacts How can they govern this changing technology in a rapidly changing world using tools that may themselves be altered by AI Architectures of Global AI Governance provides the conceptual and practical tools to tackle this question Drawing from technology law global governance scholarship and history the book maps AI's growing global stakes traces the trajectory of the global AI regime complex and sets the scaffolding for new institutions The book argues that in crafting a global AI governance architecture we must reckon with three facets of change sociotechnical changes in AI systems uses and impacts AI driven changes in the fabric of international law and political changes in the global AI regime complex Many AI governance approaches will be too static unless they adapt to these forces In response Architectures of Global AI Governance equips researchers and policymakers with insights and actionable recommendations for questions of regulatory approach instrument choice and regime design More than just an inquiry into how to govern AI this book explores the changing face of global cooperation in the intelligence era and how we can safeguard human choice over a future of transformative technological change This is an open access title available under the terms of a CC BY NC ND 4.0 International licence It is free to read on Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations
