On Video Games Soraya Murray, 2017-10-30 Today over half of all American households own a dedicated game console and gaming industry profits trump those of the film industry worldwide In this book Soraya Murray moves past the technical discussions of games and offers a fresh and incisive look at their cultural dimensions She critically explores blockbusters like *The Last of Us* *Metal Gear Solid* *Spec Ops* *The Line* *Tomb Raider* and *Assassin's Creed* to show how they are deeply entangled with American ideological positions and contemporary political cultural and economic conflicts As quintessential forms of visual material in the twenty first century mainstream games both mirror and spur larger societal fears hopes and dreams and even address complex struggles for recognition This book examines both their elaborately constructed characters and densely layered worlds whose social and environmental landscapes reflect ideas about gender race globalisation and urban life In this emerging field of study Murray provides novel theoretical approaches to discussing games and playable media as culture Demonstrating that games are at the frontline of power relations she reimagines how we see them and more importantly how we understand them

Video Error Concealment Techniques for Multi-Broadcast Reception of Digital TV Tobias Tröger, 2012-10-02 Abstract The transmission of digital TV signals to mobile receivers is often error prone As most TV broadcasting techniques provide only moderate error robustness horizontal lines of consecutive image blocks are lost during decoding of the received video signals In order to ensure high viewing experiences these lost slices have to be filled by error concealment techniques However the reconstruction qualities of classical approaches which exploit spatial temporal or spatio temporal signal correlations are not convincing yet In the future mobile TV receivers will support different broadcasting techniques in parallel As a result an erroneous high resolution video signal and a correctly received low resolution video signal both representing the same TV service will often be available Focusing on the outlined scenario for multi broadcast reception of digital TV signals this thesis introduces the novel category of inter sequence error concealment algorithms The basic idea is to fill lost slices of the high resolution video signal by the interpolated low resolution video signal Since the images of this reference signal are often cropped and delayed robust spatio temporal image alignment is crucial By including a pixel based or a feature based alignment scheme the proposed

concealment algorithms provide excellent visual qualities and outstanding reconstruction qualities of up to 41 dB PSNR. Classical concealment techniques are outperformed by up to 15 dB PSNR. To further enhance the reconstruction quality, several extensions are introduced. First, the alignment robustness and the interpolation quality are increased. Subsequently, a classical temporal approach is incorporated as an alternative concealment mode to cope with low image qualities of the reference signal. Novel aspects include robust mode selection, enhanced motion estimation, and the reconstruction of the displaced frame differences from the reference signal. As a last extension, spatial refinement tackles blurring of concealed image blocks. Missing spectral components are recovered in a frequency selective way based on approximation and extrapolation principles. By combining all relevant extensions, the PSNR gain adds up to 20 dB with respect to classical concealment. Finally, inter sequence error concealment is adapted to multi broadcast reception of two erroneous high resolution video signals. While spatial alignment can be omitted, classical concealment of blocks being lost in both video signals and drift compensation in predictively coded frames are novel aspects. Again, high visual qualities are obtained, and classical concealment is outperformed by up to 15 dB PSNR.

Zusammenfassung Der Empfang digitaler Fernsehsignale mit mobilen Endgeräten wird meist durch Übertragungsfehler gestört. Da viele der eingesetzten Übertragungsstandards nur unzureichende Korrekturmechanismen bieten, können bei der Decodierung der empfangenen Videosignale Blockzeilenverluste auftreten. Um die Verlustgebiete zu verschleiern, werden üblicherweise zeitliche räumliche oder zeitlich räumliche Signalkorrelationen ausgenutzt. Die dabei erzielte Rekonstruktionsqualität ist jedoch häufig nicht zufriedenstellend. Zukünftig werden mobile Fernsehempfänger mehrere Übertragungsstandards parallel unterstützen. Durch den Einsatz dieser Mehrfachempfänger ist jedes Fernsehprogramm typischerweise in Form eines gestörten hochauflösenden Videosignals und eines ungestörten niedrigauflösenden Videosignals verfügbar. Ausgehend vom Mehrfachempfang digitaler Fernsehsignale wird in dieser Arbeit eine neue Gruppe von Verfahren zur Fehlerverschleierung beschrieben. Die grundlegende Idee dieser Ansätze besteht darin, verlorene Bildblöcke des hochauflösenden Videosignals durch Blöcke des interpolierten niedrigauflösenden Referenzsignals zu ersetzen. Da das Referenzsignal häufig nur Bildausschnitte zeigt und zudem meist zeitverzerrt eintrifft, ist die korrekte Bestimmung der räumlichen Abbildungsparameter und des zeitlichen Versatzes ausschlaggebend für eine hochqualitative Verschleierung. Durch den Einsatz bildbasierter oder merkmalsbasierter Schätzverfahren werden eine exzellente visuelle Bildqualität und eine außergewöhnlich hohe Rekonstruktionsqualität erzielt. Der Spitzensignalaruschabstand beträgt bis zu 41 dB. Herkömmliche Verfahren werden um bis 15 dB betroffen. Um die Rekonstruktionsqualität weiter zu erhöhen, werden zahlreiche Erweiterungen der beschriebenen Verschleierungsansätze vorgeschlagen. Zuerst werden die Zuverlässigkeit der Parameterschätzung und die Interpolationsqualität verbessert. Danach wird ein herkömmliches zeitliches Verschleierungsverfahren integriert, um eine niedrige Bildqualität des Referenzsignals zu kompensieren. Neue Aspekte sind dabei die robuste Wahl des besseren Verschleierungsmodus, eine verbesserte Bewegungsschätzung und die

Rekonstruktion des Prädiktionsfehlers unter Verwendung des Referenzsignals. Zuletzt wird die Bildschärfe bereits verschleierte Bilder erhöht. Dazu werden fehlende Spektralanteile basierend auf frequenzselektiven Approximationen oder Extrapolationsansätzen wiederhergestellt. Durch die Kombination aller relevanten Erweiterungen wird die Rekonstruktionsqualität herkömmlicher Verfahren um bis zu 20 dB verbessert. Abschließend werden die beschriebenen Fehlerverschleiervorgänge an ein Szenario für den Mehrfachempfang digitaler Fernsehsignale angepasst, bei dem zwei fehlerhafte hochauflösende Videosignale verfügbar sind. Während die Schätzung der räumlichen Abbildungsparameter ermöglicht, müssen Bilder, die in keinem der beiden Videosignale korrekt empfangen wurden, durch herkömmliche Verfahren verschleiert werden. Als weitere Neuerung wird ein Verfahren zur Kompensation des Drifteffekts in prädiktiv codierten Bildern vorgeschlagen. Auch bei diesem Empfangsszenario wird eine hohe visuelle Bildqualität erzielt, und die Rekonstruktionsqualität herkömmlicher Verfahren um bis zu 15 dB verbessert.

Cognitive and Brain Plasticity Induced by Physical Exercise, Cognitive Training, Video Games and Combined Interventions Soledad Ballesteros, Claudia Voelcker-Rehage, Louis Bherer, 2018-07-05. The premise of neuroplasticity on enhancing cognitive functioning among healthy as well as cognitively impaired individuals across the lifespan and the potential of harnessing these processes to prevent cognitive decline attract substantial scientific and public interest. Indeed, the systematic evidence base for cognitive training, video games, physical exercise, and other forms of brain stimulation such as entrain brain activity is growing rapidly. This Research Topic RT focused on recent research conducted in the field of cognitive and brain plasticity induced by physical activity, different types of cognitive training, including computerized interventions, learning therapy, video games, and combined intervention approaches, as well as other forms of brain stimulation that target brain activity, including electroencephalography and neurofeedback. It contains 49 contributions to the topic, including Original Research articles (37), Clinical Trials (2), Reviews (5), Mini Reviews (2), Hypothesis and Theory (1), and Corrections (2).

Buffering Techniques for Delivery of Compressed Video in Video-on-Demand Systems Wu-Chi Feng, 2007-08-26. Many emerging technologies such as video conferencing, video on demand, and digital libraries require the efficient delivery of compressed video streams. For applications that require the delivery of compressed, stored multimedia streams, the a priori knowledge available about these compressed streams can aid in the allocation of server and network resources. By using a client-side buffer, the resource requirements from the server and network can be minimized. Buffering Techniques for Delivery of Compressed Video in Video-on-Demand Systems presents a comprehensive description of buffering techniques for the delivery of compressed, prerecorded multimedia data. While these techniques can be applied to any compressed data streams, this book focusses primarily on the delivery of video streams because of the large resource requirements that they can consume. The book first describes buffering techniques for the continuous playback of stored video sources. In particular, several bandwidth smoothing or buffering algorithms that are provably optimal under certain conditions are presented. To provide a well-rounded discussion, the book then describes

extensions that aid in the ability to provide interactive delivery of video across networks. Specifically, reservation techniques that take into account interactive functions such as fast forward and rewind are described. In addition, extensions to the bandwidth smoothing algorithms presented in the first few chapters are described. These algorithms are designed with interactive continuous playback of stored video in mind and are also provably optimal under certain constraints. Buffering Techniques for Delivery of Compressed Video in Video on Demand Systems serves as an excellent resource for multimedia systems networking and video on demand designers and may be used as a text for advanced courses on the topic.

A Unified Framework for Video Summarization, Browsing & Retrieval Ziyu Xiong, Regunathan Radhakrishnan, Ajay Divakaran, Zou Yong-Rui, Thomas S. Huang, 2006-01-16. Large volumes of video content can only be easily accessed by the use of rapid browsing and retrieval techniques. Constructing a video table of contents (ToC) and video highlights to enable end users to sift through all this data and find what they want when they want are essential. This reference puts forth a unified framework to integrate these functions supporting efficient browsing and retrieval of video content. The authors have developed a cohesive way to create a video table of contents, video highlights, and video indices that serve to streamline the use of applications in consumer and surveillance video applications. The authors discuss the generation of table of contents, extraction of highlights, different techniques for audio and video marker recognition and indexing with low level features such as color texture and shape. Current applications including this summarization and browsing technology are also reviewed. Applications such as event detection in elevator surveillance, highlight extraction from sports video, and image and video database management are considered within the proposed framework. This book presents the latest in research and readers will find their search for knowledge completely satisfied by the breadth of the information covered in this volume. Offers the latest in cutting edge research and applications in surveillance and consumer video. Presentation of a novel unified framework aimed at successfully sifting through the abundance of footage gathered daily at shopping malls, airports, and other commercial facilities. Concisely written by leading contributors in the signal processing industry with step by step instruction in building video ToC and indices.
