

Nuclear Magnetic Resonance and Magnetic Resonance Imaging

NMR and MRI are two techniques that share similar principles but have different applications. We primarily use NMR in chemistry and biochemistry to analyze the structure and properties of molecules. However, we apply MRI in medical imaging to visualize the body's internal structures. Both techniques have contributed significantly to various fields, and their applications continue to expand.

magnetic resonance spectroscopy is presently going through an explosive phase of development This has been brought about largely on account of the advent of Fourier transform NMR spectrometers linked to powerful microcomputers which have opened up a whole new world for structural chemists and biochemists This is exemplified by a host of publications especially on new pulse sequences which continue to provide new exciting modifications for recording two dimensional NMR Moreover NMR is no longer confined to structural chemists but has moved firmly into the area of medicine as a powerful nondestructive body scanning technique With this background I felt that there was need for a text which would provide a fairly comprehensive account of the important features of ^1H and ^{13}C NMR spectroscopy in one book as well as make available an up to date account of recent developments of new pulse sequences with particular reference to 2D NMR spectroscopy Since this book is written for students of chemistry and biochemistry as well as for biology students who have chemistry as a subsidiary it was decided to avoid a complex mathematical treatment and to present as far as possible without oversimplification a qualitative account of ^1H and ^{13}C NMR spectroscopy as it is today I hope that the book satisfactorily meets these objectives

Nuclear Magnetic Resonance in Modern Technology G.E. Maciel, 2012-12-06 This volume represents the primary lectures of the NATO Advanced Study Institute ASI on Nuclear Magnetic Resonance in Modern Technology which was held at Sarigerme Park near the Dalaman Airport on the southern Aegean shore of Turkey from August 23 to September 4 1992 As indicated in the title this ASI was aimed at examining displaying and perhaps influencing the role of nuclear magnetic resonance NMR in modern technological activity The lectures summarized in this volume and the numerous short

contributed talks and posters were primarily aimed at the question What is NMR doing in support of modern technology During the main discussion periods and the numerous small scheduled meetings of specific interest groups this same topic was also addressed along with questions like What could or should NMR be doing in support of modern technology With this kind of subject orientation the organizers attempted to include a large participation at the ASI from scientists and engineers from diverse private industries in which NMR does or perhaps should play a substantial role in supporting or optimizing technology Perhaps because of a combination of worldwide industrial contractions and residual corporate nervousness regarding the then recent Gulf War which caused a one year postponement of this ASI the participation from private industry was numerically disappointing We hope that this book will serve to bring the role of NMR in modern industry to the attention of numerous industrial scientists and engineers who were unable to attend the ASI
