Vom Paläolithikum zur Postmoderne - Die Genese unseres Epochen-Systems

Andreas Kamp, 2011-02-03 Dies ist der erste Teil einer zweibändigen Studie zur Genese unseres heutigen vom Anspruch her den chronologischen Verlauf der gesamten Menschheitsgeschichte strukturierenden Epochen Systems Der Band skizziert zunächst die geistesgeschichtlichen Prämissen Von der rudimentären paläolithischen Zeiteinteilung führt er über die ältesten schriftlich dokumentierten Ordnungsversuche in den sumerischen bzw. ägyptischen Königlisten griechische und römische Autoren Petrarca Bruni und Vasari bis zu Cellarius der am Ende des 17. Jahrhunderts die Drei Zeitalter Distinktion Antike Mittelalter Neuzeit zum zentralen chronologischen Gliederungsprinzip der Weltgeschichte erhob Anschließend stehen die drei klassischen von Pyrrhon Polybios bzw. Ptolemaios entwickelten Epoch Konzepte sowie deren Auftauchen und Rezeption im lateinischen Europa im Fokus Sodann wird die erstaunlich spät nämlich erst nach Mitte des 16. Jahrhunderts einsetzende Transformation der Epoch zur fundamentalen historiographischen Ordnungskategorie thematisiert Schließlich verfolgen wir anhand zahlreicher Autoren sowie der kontemporären Lexikographie ihren auf Latein wie in den relevanten europäischen Volkssprachen Englisch Französisch Deutsch Spanisch Portugiesisch Italienisch stattfindenden Divulgationsprozesse Dabei erweist sich der Ausgang des 17. Jahrhunderts erneut als Wasserscheide Der erste Band endet deshalb an dieser Stelle der zweite wird dann die weitere Entwicklung von 1700 bis zur Gegenwart analysieren This is the first part of a two volume study of the genesis of our modern day system of epochs which claims to structure the chronology of the entire history of mankind The volume sets out by sketching the intellectual premises It leads from the rudimentary Palaeolithic division of time via the oldest attempts at structuring to have been documented in written form through to the Sumerian and Egyptian King Lists to Greek and Roman authors to Petrarch Bruni and Vasari and finally to Cellarius who in the late 17th century introduced the distinction between the three epochs of Antiquity the Middle Ages and the Modern Era as the basic chronological principle of organising the history of the world This is followed by a closer look at the three classical concepts of Epoch as defined by Pyrrhon Polybios and Ptolemaios respectively as well as their surfacing and reception in Latin Europe Not until the second half of the 16th century which is an astonishingly late point in time can the transformation of Epoch into a fundamental category of historiographic structuring be detected Finally by studying numerous writers as well as the contemporary lexicography we will outline the process of divulgation that took place both in Latin as well as in the relevant European vernaculars English French German Spanish Portuguese Italian In the process the late 17th century again proves to be a kind of divide As a consequence volume one ends here a second volume forthcoming will analyse the further development to the present day Limits, Limits Everywhere David Applebaum, 2012-03-01 A quantity can be made smaller and smaller without it ever vanishing This fact has profound consequences for science technology and even the way we think about numbers In this book we will explore this idea by moving at an easy pace through an account of elementary real analysis and in particular will

focus on numbers sequences and series Almost all textbooks on introductory analysis assume some background in calculus This book doesn't and instead the emphasis is on the application of analysis to number theory The book is split into two parts Part 1 follows a standard university course on analysis and each chapter closes with a set of exercises Here numbers inequalities convergence of sequences and infinite series are all covered Part 2 contains a selection of more unusual topics that aren't usually found in books of this type It includes proofs of the irrationality of e and continued fractions an introduction to the Riemann zeta function Cantor's theory of the infinite and Dedekind cuts There is also a survey of what analysis can do for the calculus and a brief history of the subject A lot of material found in a standard university course on real analysis is covered and most of the mathematics is written in standard theorem proof style However more details are given than is usually the case to help readers who find this style daunting Both set theory and proof by induction are avoided in the interests of making the book accessible to a wider readership but both of these topics are the subjects of appendices for those who are interested in them And unlike most university texts at this level topics that have featured in popular science books such as the Riemann hypothesis are introduced here As a result this book occupies a unique position between a popular mathematics book and a first year college or university text and offers a relaxed introduction to a fascinating and important branch of mathematics

Lerner, 2019-10-04 Glaucoma surgery was the topic of the eleventh World Glaucoma Association Consensus meeting Glaucoma surgery in primary open angle glaucoma was also the topic of the second Consensus meeting held in 2005 For the current version angle closure and angle closure glaucoma as well as the secondary glaucomas were also included But the expansion of the subject matter is not the only reason for the timing of this new Consensus Perhaps even more important is the explosion of new surgical ideas and techniques which are revolutionizing the surgical approach to the glaucoma patient The idea of targeting anatomic outflow and inflow pathways and individualizing care has opened so many new possibilities for improving surgical outcomes Furthermore outcomes are no longer only focused on lowering intraocular pressure but also on enhancing health and vision related quality of life As with prior meetings it was a daunting task to seek and obtain consensus on a broad subject matter for which there are so many different opinions As it is unclear how each of us decides how we practice and the evidence to guide us often is sparse this consensus as well as the others is based not only on the published literature but also on expert opinion Although consensus does not replace and is not a surrogate for scientific investigation it does provide considerable value especially when the desired evidence is lacking The goal of this consensus is to provide a foundation for glaucoma surgery and how it can be best done in clinical practice Identification of those areas for which we have little evidence and therefore the need for additional research always is a high priority We hope that this consensus report will serve as a benchmark of our understanding of what is known and what we would like to know However this Consensus Report is expected to be just a beginning that will be revised and improved with the emergence of new evidence and new and improved surgical procedures **Die Naturwissenschaften Band I** Friedrich
