syntax of a model One of the routine but important functions of ANALYZE is to enable convenient access to rows and columns in the matrix by conditional delineation Chapter 3 illustrates simple queries like DISPLAY LIST and PICTURE This chapter also introduces the SUBMAT command level to define any submatrix by an arbitrary sequence of additions deletions and reversals Syntactic explanations and a schema view are also illustrated Chapter 4 goes through some elementary exercises to demonstrate computer assisted analysis and introduce additional conventions of the ANALYZE language Besides simple queries it demonstrates the INTERPRT command which automates the analysis process and gives English explanations of results The last 2 exercises are diagnoses of elementary infeasible instances of a particular model Chapter 5 progresses to some advanced uses of ANALYZE The first is blocking to obtain macro views of the model and for finding embedded substructures like a netform The second is showing rates of substitution described by the basic equations Then the use of the REDUCE and BASIS commands are illustrated for a variety of applications including solution analysis infeasibility diagnosis and redundancy detection
