Economic Evaluation of Interventions for Occupational Health and Safety Emile Tompa, Anthony J Culyer, Roman Dolinschi, 2008-08-21 Undertaking economic evaluations of workplace based occupational health and safety interventions can be difficult reflected by the significant lack of literature evidence and guidance on the subject Particular difficulties include complex labour legislation differences in the perception of health risks associated with work experiences amongst workplace parties and policy makers the burden of costs and consequences being borne by different stakeholders in the system conflicting incentives and priorities between the multiple stakeholders lack of consensus about what ought to count as a benefit or cost of intervening or not intervening multiple providers of indemnity and medical care coverage and industry specific human resources practices making it difficult to identify all work related illnesses and injuries In addition most health economics methods books are designed for use in a clinical setting which cannot be adapted for the workplace setting In the face of such barriers it is not surprising that few studies of occupational health and safety interventions contain an economic evaluation This book aims to lay the foundations for a systematic methodology of economic evaluation of workplace interventions by identifying the main barriers to research of high quality and practical relevance and proposing a research strategy to remedy these weaknesses Context chapters provide a wealth of background material ranging from a presentation of the broad conceptualization of work and health to suggestions for strategies in confronting the dearth of data often experienced by occupational health and safety researchers They take into account the varying institutional and regulatory approaches in different international jurisdictions Specific topic chapters delve into the principles and application of economic evaluation methods relevant to this setting study design type of analysis costs consequences uncertainty and equity are all covered providing guidance on analytical and decision making challenges The concluding chapter synthesizes the summaries conclusions challenges and recommendations from across the book presenting these in a reference case

Cost-Benefit Analysis Tevfik F. Becker Jr., Rolf A. Walstad, 2012-12-06 Since its establishment in the 1950s the

American Economic Association's Committee on Economic Education has sought to promote improved instruction in economics and to facilitate this objective by stimulating research on the teaching of economics. These efforts are most apparent in the sessions on economic education that the Committee organizes at the Association's annual meetings. At these sessions economists interested in economic education have opportunities to present new ideas on teaching and research and also to report the findings of their research. The record of this activity can be found in the Proceedings of the American Economic Review. The Committee on Economic Education and its members have been actively involved in a variety of other projects. In the early 1960s it organized the National Task Force on Economic Education that spurred the development of economics teaching at the precollege level. This in turn led to the development of a standardized research instrument, a high school test of economic understanding. This was followed later in the 1960s by the preparation of a similar test of understanding college economics. The development of these two instruments greatly facilitated research on the impact of economics instruction, opened the way for application of increasingly sophisticated statistical methods in measuring the impact of economic education, and initiated a steady stream of research papers on a subject that previously had not been explored.
